This comprehensive guide will equip you with common interview questions, the reasoning behind them, and how to craft compelling answers that showcase your expertise. We'll delve into the core competencies interviewers look for, from strategic alignment to risk management and team leadership, ensuring you're prepared to impress.

Understanding the Role of a Program Manager

Before diving into specific questions, let's clarify what makes a program manager distinct. While project managers focus on individual project success (scope, schedule, budget), program managers oversee a collection of interconnected projects that contribute to a larger strategic objective. They manage dependencies, resource allocation across projects, and ensure the overall program delivers the intended benefits and aligns with the organization's goals. This broader perspective is key.

Common Interview Question Categories

Program manager interviews typically fall into several key categories. By understanding these categories, you can anticipate the types of questions and prepare your responses accordingly.

Strategic Alignment and Vision

The ability to connect program initiatives to the overarching business strategy is paramount. Interviewers want to know you can see the forest for the trees.

"How do you ensure a program aligns with an organization's strategic goals?"

This is your chance to demonstrate your understanding of business strategy. * **What they're looking for:** Your process for understanding strategic objectives, how you translate them into program goals, and how you maintain that alignment throughout the program lifecycle. * **How to answer:** Start by explaining how you'd initially engage with leadership or strategic documents to grasp the company's vision. Discuss methods like defining program objectives that directly support strategic pillars, establishing key performance indicators (KPIs) that measure strategic contribution, and regularly reviewing program progress against these objectives with stakeholders. Mention frameworks like OKRs (Objectives and Key Results) if applicable.

"Describe a time you had to pivot a program due to a change in strategic direction. What was your approach?"

This question assesses your adaptability and strategic foresight. * **What they're looking for:** Your ability to recognize shifts, assess impact, and make necessary adjustments to maintain program relevance and value. * **How to answer:** Use the STAR method (Situation, Task, Action, Result). Detail the situation where strategy changed, the task of realigning the program, the specific actions you took (e.g., stakeholder consultations, re-scoping, re-prioritization, communication plans), and the positive or learning outcome. Emphasize proactive communication and the rationale behind your decisions.

"How do you identify and prioritize programs that will deliver the most business value?"

This probes your understanding of value-driven decision-making. * **What they're looking for:** Your framework for evaluating potential programs, considering factors beyond just project feasibility. * **How to answer:** Discuss how you'd assess a program's potential impact on revenue, cost savings, market share, customer satisfaction, or competitive advantage. Mention methods like ROI (Return on Investment) analysis, cost-benefit analysis, and scoring models that weigh strategic alignment, risk, and resource requirements. Explain how you collaborate with business leaders to define what "value" means in their context.

Program Planning and Execution

This is the operational heart of the program manager role. How do you get things done, and done well?

"Walk me through your process for initiating a new program."

This question gauges your structured approach to setting up a program for success. * **What they're looking for:** A clear, step-by-step methodology that covers all essential initiation phases. * **How to answer:** Outline your standard program initiation phases. This might include: defining the program charter, identifying key stakeholders and their needs, conducting a feasibility study, establishing the program governance model, defining high-level scope and objectives, creating a preliminary budget, and forming the core program team. Emphasize the importance of establishing a solid foundation.

"How do you manage dependencies between multiple projects within a program?"

Dependencies are a hallmark of program management. * **What they're looking for:** Your strategies for identifying, tracking, and mitigating risks associated with inter-project

dependencies. * **How to answer:** Explain that you proactively map out all dependencies early on. Discuss using tools and techniques like dependency matrices, Gantt charts with linked tasks, and regular cross-project team meetings to identify and monitor these relationships. Talk about establishing clear communication channels and escalation paths to address any blocking dependencies immediately.

"Describe your approach to resource management across a program."

Effective resource allocation is crucial for preventing bottlenecks and ensuring efficient delivery. * **What they're looking for:** Your ability to balance competing demands for resources and optimize their utilization. * **How to answer:** Explain how you'd create a comprehensive resource plan that considers the skills, availability, and cost of resources needed for each project. Discuss techniques like resource leveling, capacity planning, and proactive identification of potential resource conflicts or shortages. Mention how you collaborate with functional managers to secure the right talent.

"How do you manage scope creep in a program?"

Scope creep is a persistent challenge in any complex initiative. * **What they're looking for:** Your proactive measures and robust change control processes. * **How to answer:** Emphasize the importance of a well-defined scope statement in the program charter. Detail your change control process: how change requests are submitted, evaluated for impact on scope, schedule, budget, and benefits, approved or rejected by a change control board, and then communicated to all stakeholders. Highlight your ability to say "no" or to carefully negotiate trade-offs.

Risk Management and Problem Solving

Programs are inherently complex and prone to risks. Your ability to anticipate and mitigate them is vital.

"What are the most common risks you encounter in program management, and how do you address them?"

This question assesses your experience and proactive risk management skills. * **What they're looking for:** A broad understanding of potential pitfalls and concrete strategies for mitigation. * **How to answer:** List common risks like scope creep, resource constraints, unrealistic timelines, stakeholder misalignment, technology issues, and external market changes. For each, describe your mitigation strategies. For example, for scope creep, mention a strong change control process. For stakeholder misalignment, discuss frequent and transparent communication. Emphasize proactive identification through risk registers and regular risk review meetings.

"Tell me about a significant challenge or crisis you faced in a program. How did you resolve it?"

This is a prime opportunity to showcase your problem-solving and crisis management skills under pressure. * **What they're looking for:** Your ability to remain calm, analyze the situation, make decisive actions, and learn from the experience. * **How to answer:** Use the STAR method. Describe the situation (e.g., a major technical failure, a key stakeholder leaving unexpectedly, a significant budget overrun). Explain the task (your responsibility to resolve it). Detail your actions (e.g., forming a SWAT team, renegotiating contracts, communicating transparently with leadership, re-planning). Conclude with the result and any lessons learned that improved future program delivery.

"How do you identify and manage program-level risks versus project-level risks?"

This highlights your ability to distinguish and manage risks at different levels of granularity. * **What they're looking for:** An understanding of the hierarchical nature of risk in a program setting. * **How to answer:** Explain that project-level risks are specific to individual projects, while program-level risks can impact the entire program's success. Provide examples: a project risk might be a specific developer leaving, while a program risk might be a change in regulatory compliance affecting multiple projects. Discuss how you maintain separate risk registers but ensure program risks are aggregated and managed at the program level, often requiring executive intervention.

Stakeholder Management and Communication

Successful program managers are excellent communicators and relationship builders.

"How do you identify and engage with program stakeholders?"

Understanding who your stakeholders are and what they need is fundamental. * **What they're looking for:** Your systematic approach to stakeholder identification and engagement. * **How to answer:** Describe your process for creating a stakeholder register, identifying all individuals or groups who have an interest in or will be affected by the program. Discuss methods for analyzing their influence, interest, and expectations. Explain how you develop a tailored communication plan to keep them informed and engaged, considering their preferred communication channels and frequency.

"Describe a situation where you had to manage conflicting stakeholder expectations. How did you approach it?"

This question tests your negotiation and conflict resolution skills. * **What they're looking for:** Your ability to mediate, find common ground, and achieve buy-in. * **How to

answer:** Use the STAR method. Detail a situation with clear conflicting interests. Explain your task of finding a resolution. Describe your actions: active listening, understanding each stakeholder's underlying needs and concerns, facilitating discussions, exploring alternative solutions, and potentially seeking executive guidance to make a final decision. Emphasize transparency and focusing on program objectives.

"How do you communicate program status and progress to different levels of stakeholders (e.g., executives, project teams, end-users)?"

Effective communication is tailored to the audience. * **What they're looking for:** Your ability to adapt your message and reporting style. * **How to answer:** Explain that you use different communication methods and levels of detail for different audiences. For executives, focus on high-level summaries, key milestones, strategic impact, and any critical risks or decisions required. For project teams, provide detailed operational updates. For end-users, focus on benefits and upcoming changes. Mention using dashboards, executive summaries, regular reports, and town hall meetings.

Leadership and Team Management

Program managers often lead diverse teams, directly or indirectly.

"How do you motivate and lead cross-functional teams?"

Inspiring and guiding diverse groups is key to program success. * **What they're looking for:** Your leadership style and ability to foster collaboration. * **How to answer:** Discuss building a shared vision, fostering a collaborative environment, recognizing and celebrating successes, providing clear direction and support, empowering team members, and addressing conflicts constructively. If situational, explain how you adapt your approach based on the team member's skill and motivation.

"How do you handle underperforming team members or projects within your program?"

Addressing issues proactively is crucial for program health. * **What they're looking for:** Your ability to identify problems early, provide support, and take corrective action. *

How to answer: Explain that you address underperformance by first trying to understand the root cause. This might involve one-on-one conversations, providing additional training or resources, clarifying expectations, or adjusting workloads. If performance doesn't improve, discuss your process for implementing performance improvement plans or, as a last resort, making tough decisions about reassigning responsibilities or personnel, always with appropriate documentation and HR involvement.

Behavioral and Situational Questions

These questions delve into your past experiences to predict future behavior.

"Give me an example of a time you had to make a difficult decision under pressure."

This tests your decision-making process and resilience. * **What they're looking for:** Your ability to analyze situations quickly, weigh options, and act decisively. * **How to answer:** Use the STAR method. Choose a situation where the stakes were high and time was limited. Describe the context, the decision you had to make, the options you considered, your rationale for the chosen decision, the action you took, and the outcome. Focus on your thought process and the justification for your choice.

"What are your strengths and weaknesses as a program manager?"

A classic interview question that requires thoughtful self-assessment. * **What they're looking for:** Self-awareness, honesty, and a proactive approach to development. * **How to answer:** * **Strengths:** Choose 2-3 strengths that are directly relevant to program management (e.g., strategic thinking, excellent communication, strong analytical skills, leadership). Back them up with brief examples. * **Weaknesses:** Be honest but strategic. Choose a genuine weakness that you are actively working to improve. Frame it positively by discussing how you are addressing it. Avoid clichés like "perfectionism." Instead, consider something like "difficulty delegating initially, but I'm learning to trust my team more by providing clear guidance and oversight."

"Why do you want to be a program manager, and why are you interested in this specific role?"

This reveals your passion and your research. * **What they're looking for:** Your motivation for the role and your understanding of their organization and program needs. * **How to answer:** Connect your passion for program management to your skills and experiences. For the specific role, demonstrate that you've researched the company, its industry, and potentially the programs they manage. Highlight how your skills and experience align with their stated requirements and how you can contribute to their success.

Questions to Ask the Interviewer

Your questions at the end of the interview are just as important as your answers. They show your engagement and genuine interest.

"What are the biggest challenges this program is currently facing?"

This shows you're thinking critically about the role.

"How is success measured for this program and for the program manager?"

Understanding expectations and KPIs is crucial.

"Can you describe the team I would be working with and the overall organizational culture?"

Assessing fit is a two-way street.

"What are the opportunities for professional development within this role and the company?"

Interview Questions for a Program Manager: Mastering the Art of Leadership and Strategy

In today's fast-paced business environment, selecting a program manager demands more than just technical expertise—it requires vision, adaptability, and the ability to align teams, resources, and goals across multiple initiatives. A program manager operates at the intersection of strategy and execution, overseeing complex portfolios that often span departments, timelines, and organizational layers. To identify the right leader for such a role, interview questions must go beyond role-specific tasks and probe into nuanced leadership capabilities, strategic thinking, and real-world problem solving.

Understanding Strategic Thinking and Program Vision

At the heart of effective program management lies the ability to shape and communicate a compelling program vision. Interviewers should explore how candidates have defined and advanced program objectives in alignment with broader organizational strategy. A thoughtful question might ask, "Can you describe a time when you had to realign a program's direction due to shifting business priorities? What approach did you take, and what was the outcome?" This reveals not only strategic foresight but also resilience and stakeholder management. Equally important is assessing how they balance short-term deliverables with long-term impact—questions like "How do you ensure that day-to-day execution supports the overarching program vision?" help uncover a candidate's ability to maintain focus amid distractions.

Navigating Cross-Functional Collaboration and Stakeholder Engagement

A program manager rarely works in isolation; success hinges on building strong relationships across teams, executives, and external partners. To evaluate this critical skill, interviewers should probe how candidates foster collaboration and manage diverse expectations. For instance, "Tell me about a challenging situation where conflicting priorities emerged between departments within a program. How did you navigate the

situation to achieve alignment?” This invites reflection on communication techniques, conflict resolution, and the use of influence rather than authority. Additionally, asking, “How do you keep stakeholders informed and engaged throughout a program’s lifecycle?” reveals their approach to transparency, trust-building, and proactive communication—key traits for maintaining momentum and support.

Managing Risk, Change, and Uncertainty

Programs are inherently exposed to risks—from resource constraints and scope creep to external market shifts. Interview questions must uncover a candidate’s risk management mindset and adaptability. A powerful question might be, “Describe a time when a major risk materialized in a program. What steps did you take to assess, mitigate, and communicate the impact?” This uncovers their analytical rigor, decision-making under pressure, and ability to turn challenges into opportunities. Further, exploring change management reveals how they lead transformation: “How have you helped teams adapt to significant program changes, such as new technology rollouts or policy updates?” Their response should highlight empathy, training strategies, and the importance of clear, consistent messaging to sustain morale and productivity.

Driving Performance and Continuous Improvement

Beyond delivering on time and budget, program managers must drive sustained performance and foster learning. Questions that reveal a commitment to continuous improvement are essential. For example, “What metrics or methods do you use to evaluate program success beyond traditional KPIs?” This encourages discussion of qualitative feedback, stakeholder satisfaction, and post-program reviews. Similarly, “How do you identify and implement process improvements across programs?” highlights their proactive mindset and commitment to organizational excellence. Candidates who emphasize data-driven decision-making, cross-program knowledge sharing, and iterative learning demonstrate a growth-oriented leadership style that fuels long-term success.

Future-Proofing the Program: Innovation and Agility

As digital transformation and agile methodologies reshape project delivery, future-focused program managers must embrace innovation while maintaining discipline. Interviewers should assess how candidates anticipate change and leverage emerging tools. A relevant question could be, “How do you balance structured program governance with the flexibility needed for agile or innovative approaches?” This reveals their ability to blend control with adaptability. Additionally, asking, “What emerging trends do you see most impacting program management, and how would you prepare your team to thrive in that environment?” invites strategic insight and forward-thinking—qualities vital for sustained relevance in an evolving landscape. In an era where program complexity

continues to grow, securing a skilled program manager requires asking the right questions—ones that reveal not just what candidates have done, but how they think, lead, and evolve. By focusing on strategic vision, collaboration, adaptability, performance excellence, and future readiness, organizations can identify leaders who don't just manage programs, but shape the success of entire business ecosystems.

Core Program Manager Interview Question Categories

Program Manager interviews typically explore a candidate's experience, skills, and potential across several key domains. Expect questions related to your past achievements, your approach to problem-solving, your leadership style, and your understanding of program management methodologies.

I. Behavioral and Situational Questions: Proving Your Past Performance

These questions aim to understand how you've handled specific situations in the past, as past behavior is often a strong predictor of future performance. They often begin with phrases like "Tell me about a time when..." or "Describe a situation where...".

A. Leadership and Team Management

A Program Manager is a leader, not just a manager. Interviewers want to see your ability to inspire, motivate, and guide diverse teams.

1. **"Tell me about a time you had to lead a team through a particularly challenging project. What were the challenges, and how did you overcome them?"**

Analysis: This probes your leadership under pressure, your problem-solving skills, and your ability to maintain team morale. Focus on the specific actions you took, the communication strategies you employed, and the outcome. Quantify your successes where possible.

Example Snippet: "In a previous role, we were managing a critical software launch with a tight deadline. Midway through, a key team member responsible for a crucial module resigned unexpectedly. My immediate action was to hold a transparent team meeting, reassess the remaining work, and then redistribute tasks based on individual strengths and current workloads. I also implemented daily stand-ups to ensure constant communication and early detection of roadblocks, and I personally worked with the remaining developers to provide support and guidance on the module they were now responsible for. This proactive approach and clear communication allowed us to meet the deadline with only a minor delay, and the team felt empowered rather than overwhelmed."

2. **"How do you motivate a team when morale is low?"**

Analysis: This assesses your understanding of team dynamics and your ability to foster a positive work environment. Consider proactive and reactive strategies.

Keywords: team motivation, employee morale, leadership strategies, conflict resolution.

3. **"Describe a situation where you had to manage a conflict within your program team. How did you resolve it?"**

Analysis: Effective conflict resolution is crucial. Demonstrate your ability to listen, mediate, and find common ground.

B. Stakeholder Management and Communication

Programs involve numerous stakeholders with diverse interests. Your ability to manage expectations and communicate effectively is vital.

1. **"Describe a time you had to manage a difficult stakeholder. What was their concern, and how did you address it?"**

Analysis: This highlights your negotiation, persuasion, and relationship-building skills. Focus on understanding the stakeholder's perspective and finding a mutually beneficial solution.

Example Snippet: "We had a senior executive who was consistently pushing for scope changes that threatened to derail our timeline. My approach was to schedule a dedicated meeting with them, not to dismiss their ideas, but to actively listen and understand the business drivers behind their requests. I then presented a clear impact analysis, showing how each proposed change would affect our budget, timeline, and resource allocation. We collaboratively identified which changes were essential and which could be deferred to a later phase, ultimately reaching a compromise that satisfied their strategic goals while preserving the integrity of the current program."

2. **"How do you ensure clear and consistent communication across a large or distributed program?"**

Analysis: This tests your understanding of communication plans, reporting mechanisms, and the use of various communication tools. Mention specific tools and techniques you've found effective.

Keywords: stakeholder communication, program reporting, communication plan, cross-functional teams.

3. **"How do you handle resistance to change within a program?"**

Analysis: Change management is an inherent part of program management. Show your ability to understand the root cause of resistance and address it empathetically and strategically.

C. Problem-Solving and Decision-Making

Programs rarely go exactly as planned. Your ability to identify, analyze, and solve problems is a hallmark of a good Program Manager.

1. **"Tell me about a significant obstacle you encountered in a program and how you resolved it."**

Analysis: This is a classic question. Use the STAR method (Situation, Task, Action, Result) to structure your answer. Focus on your analytical process and the tangible

results of your solution.

Example Snippet: "In a program to implement a new CRM system, we discovered late in the testing phase that a critical integration with our existing accounting software was failing due to incompatible data formats. This was a significant roadblock as the accounting data was essential for the CRM's functionality. My task was to find a solution quickly without compromising data integrity or introducing significant delays. I immediately convened a cross-functional team involving representatives from IT, finance, and the vendor. We analyzed the data discrepancies, explored middleware options, and ultimately decided to develop a custom data transformation script. This required an agile approach to development and testing, but by prioritizing communication and working closely with the vendor, we successfully implemented the script, resolved the integration issue, and were able to proceed with the launch on schedule."

Keywords: problem-solving techniques, issue resolution, risk mitigation, critical thinking.

2. **"Describe a situation where you had to make a difficult decision with incomplete information."**

Analysis: This assesses your comfort with ambiguity and your ability to make calculated risks. Highlight your decision-making process and how you managed the consequences.

3. **"How do you prioritize competing demands and tasks within a program?"**

Analysis: This probes your organizational and prioritization skills, essential for managing multiple workstreams.

II. Technical and Methodological Questions: Demonstrating Your Expertise

While soft skills are crucial, Program Managers also need a solid understanding of program management frameworks, tools, and best practices.

A. Program Management Methodologies

1. **"What program management methodologies are you most familiar with, and when would you choose to use each?"**

Analysis: Show your breadth of knowledge. Discuss frameworks like Agile (Scrum, Kanban), Waterfall, Hybrid, and PRINCE2. Explain the scenarios where each is most effective. Highlight your adaptability.

Example Snippet: "I have extensive experience with both Agile and Waterfall

methodologies. For projects with well-defined requirements and a predictable lifecycle, Waterfall has proven effective. However, for initiatives requiring flexibility and continuous feedback, such as software development or product innovation, I strongly advocate for Agile frameworks like Scrum. Within Scrum, I've found that using Kanban boards can be beneficial for visualizing workflow and identifying bottlenecks. I also have experience with hybrid approaches, blending elements of both to suit specific program needs. The key is to assess the project's nature, stakeholder expectations, and the team's comfort level to select the most appropriate methodology."

Keywords: Agile methodology, Waterfall, Scrum, Kanban, PRINCE2, hybrid approach, project lifecycle.

2. "How do you manage scope creep in a program?"

Analysis: This is a fundamental program management challenge. Detail your strategies for scope control, change request processes, and how you communicate impacts.

B. Tools and Technologies

1. "What program management tools have you used? Which do you find most effective and why?"

Analysis: Mention popular tools like Jira, Asana, Trello, Microsoft Project, Smartsheet, Monday.com, etc. Explain why you prefer certain tools based on their features and your program's needs.

Keywords: project management software, collaboration tools, reporting dashboards, resource management tools.

2. "How do you use data and analytics to inform program decisions and track progress?"

Analysis: This demonstrates your data-driven approach. Discuss key performance indicators (KPIs), reporting dashboards, and how you translate data into actionable insights.

C. Risk and Issue Management

1. "Describe your process for identifying, assessing, and mitigating program risks."

Analysis: This is a critical area. Outline your risk management framework, including risk registers, qualitative and quantitative risk analysis, and contingency planning. Mention specific techniques you use.

Keywords: risk assessment, risk register, mitigation strategies, contingency planning,

proactive risk management.

2. **"How do you differentiate between a program risk and a program issue?"**

Analysis: This tests your understanding of program management terminology and your ability to apply it accurately.

III. Strategic and Visionary Questions: Assessing Your Big-Picture Thinking

Beyond execution, Program Managers must align their work with the organization's strategic goals and demonstrate foresight.

A. Strategic Alignment and Business Acumen

1. **"How do you ensure your program is aligned with the overall business strategy?"**

Analysis: This is a key differentiator. Explain how you translate strategic objectives into program goals and how you measure success against those objectives. Mention concepts like OKRs (Objectives and Key Results).

Example Snippet: "My first step is always to thoroughly understand the organization's overarching business strategy and its specific objectives. I then work to translate those high-level goals into tangible, measurable program objectives and key results (OKRs). For instance, if the business strategy is to increase market share by 15%, a related program objective might be to launch a new product line that directly supports that goal. Questions & Answers About interview questions for a program manager

No	Question	Answer
1	Beyond technical skills, what 'soft skills' are paramount for a successful Program Manager, and how do you demonstrate them?	Crucial soft skills include communication (clear, concise, and empathetic), leadership (inspiring and motivating teams), stakeholder management (building rapport and managing expectations), negotiation (finding win-win solutions), and adaptability (navigating change effectively). I demonstrate these through past examples of cross-functional team leadership, successfully mediating disagreements, presenting complex roadmaps to executives, and proactively identifying and mitigating risks.

2	Describe your approach to prioritizing initiatives within a complex program. What frameworks or methodologies do you typically employ?	My approach starts with aligning initiatives to strategic business objectives. I then assess impact (value to the business) versus effort (resource requirements and complexity). Common frameworks I use include RICE (Reach, Impact, Confidence, Effort) for product features, MoSCoW (Must have, Should have, Could have, Won't have) for release planning, and simple impact/effort matrices. I always involve key stakeholders in the prioritization process to ensure buy-in and shared understanding.
3	How do you handle a situation where a critical project within your program is significantly behind schedule and over budget? What steps would you take?	First, I'd conduct a thorough root cause analysis to understand *why* the project is derailing. This involves interviewing the project team, reviewing documentation, and identifying any external dependencies. Then, I'd develop a recovery plan, which might include re-scoping, resource reallocation, or seeking additional budget. Open and transparent communication with stakeholders about the situation and the proposed solution is paramount. The goal is to mitigate further impact and get back on track.
4	What's your philosophy on managing and motivating diverse teams, especially when you don't have direct line management authority over all members?	My philosophy is centered on fostering a shared vision, clear objectives, and a collaborative environment. I focus on understanding individual motivations and strengths, providing consistent feedback and recognition, and empowering team members. Building trust and demonstrating respect for their expertise are key. I leverage influence through clear communication of program goals, highlighting the 'why' behind tasks, and celebrating collective successes.
5	Imagine you're inheriting a program with a history of missed deadlines and low team morale. What would be your first 90 days strategy to turn things around?	My first 90 days would focus on assessment, alignment, and incremental wins. Days 1-30 (Assessment): I'd conduct extensive 1:1s with team members, stakeholders, and key partners to understand current challenges, successes, and perceptions. I'd review existing documentation, processes, and historical performance. Days 31-60 (Alignment): Based on the assessment, I'd work with the team to re-clarify program goals, define realistic KPIs, and establish clear communication cadences. I'd identify quick wins to build momentum and trust. Days 61-90 (Execution & Refinement): I'd implement revised processes, address immediate blockers identified in the assessment, and begin tracking progress against new KPIs. This phase would also involve soliciting feedback and adapting the strategy as needed.
