How do I make my HTML website look good using CSS? Where do I start?

Start by understanding CSS selectors (like tag names, classes, and IDs) to target specific HTML elements.

Then, learn common properties like `color`, `background-color`, `font-family`, `font-size`, `margin`, `padding`, and

`border`. Begin by styling the basic elements you created in HTML to see immediate visual changes.

3

I've heard about 'responsive design.' How does CSS help me achieve this for my website?

Responsive design ensures your website looks good on all devices. CSS helps with this through media queries (`@media`) which allow you to apply different styles based on screen size,

**orientation, or resolution.
Flexbox and CSS Grid are
also powerful layout
modules for creating
flexible and adaptable page
structures.**

4

**What's the difference
between inline, internal,
and external CSS, and
which is best practice?**

Inline CSS is applied directly to an HTML element using the `style` attribute. Internal CSS is placed within `<style>` tags in the `<head>` of your HTML document. External CSS is written in a separate `.css` file and linked to your HTML. External CSS is generally the best practice for maintainability, organization, and reusability.⁵

**How can I add interactive
elements or animations to
my HTML and CSS website**

without JavaScript?

While complex interactivity requires JavaScript, CSS alone can achieve subtle animations and transitions.

Use the ``transition`` property to smoothly change CSS property values over a duration. You can also use ``animation`` and ``@keyframes`` to create more complex, looping animations for elements like hover effects, loading spinners, or visual cues.
