Mastering SAP HCM Payroll

Configuration: Your Comprehensive Guide

So, you're diving into the intricate world of SAP Human Capital Management (HCM) payroll? Fantastic! It's a crucial area, and getting it right means happy employees and compliant organizations. But let's be honest, it can feel like navigating a labyrinth. Don't worry, though. This comprehensive guide is designed to demystify SAP HCM payroll configuration, breaking down the complexities into digestible steps. We'll cover everything from the foundational elements to some of the more nuanced settings, all while keeping SEO best practices in mind to ensure you can find this valuable information when you need it.

SAP HCM payroll is the engine that drives compensation for your workforce. It's responsible for calculating wages, deductions, taxes, and ensuring timely and accurate payments. Effective configuration is paramount to avoid costly errors, ensure legal compliance, and maintain employee trust. Think of it as building a complex financial puzzle where every piece has to fit perfectly. In this guide, we'll explore the key building blocks of this puzzle.

Why SAP HCM Payroll Configuration Matters (More Than You Think!)

Before we get our hands dirty with the technicalities, let's quickly touch upon why this is so important. A well-configured SAP HCM payroll system:

1. **Ensures Accurate Payments:** The most obvious benefit. No one wants to be underpaid or overpaid.
2. **Guarantees Legal Compliance:** Tax laws, labor regulations, and statutory deductions are constantly changing. Your system needs to reflect these.
3. **Boosts Employee Morale:** Timely and accurate payroll is a cornerstone of employee satisfaction.
4. **Optimizes HR Processes:** Streamlined payroll processes free up HR teams to focus on strategic initiatives.
5. **Provides Data for Analysis:** Accurate payroll data is vital for workforce planning, budgeting, and reporting.

Now, let's start building the foundation of your SAP HCM payroll configuration.

The Bedrock of Configuration: Enterprise Structure & Personnel

Structure

Every SAP HCM configuration begins with defining the organizational landscape. This is where you tell SAP how your company is structured, which directly impacts how payroll will be processed.

Enterprise Structure Configuration

The Enterprise Structure in SAP HCM is like the skeleton of your organization. It defines the legal and organizational units within your company. Key elements include:

1. **Client:** The highest level in the SAP system, representing the entire organization.
2. **Company Code:** Represents a legally independent accounting unit. This is crucial for financial reporting and tax purposes, and payroll results are often posted to a specific company code.
3. **Personnel Area:** A subdivision of a company code that represents an organizational unit for personnel management. This is where you start to segment your workforce for payroll. Think of it as grouping employees by location, function, or business unit.
4. **Personnel Subarea:** A further subdivision of a Personnel Area. This allows for more granular control. For example, within a "Sales" Personnel Area, you might have "Inside

Sales" and "Field Sales" as Personnel Subareas, each with potentially different pay rules.

Why it matters for payroll: These assignments determine the default values and the scope of payroll processing for an employee. For instance, tax authorities, wage types, and pay scales can be defined at the Personnel Area or Subarea level.

Personnel Structure Configuration

While the Enterprise Structure defines the "where," the Personnel Structure defines the "who" and "how" from a role and employment perspective. Key elements include:

1. **Employee Group:** Broad classification of employees (e.g., Active Employees, Pensioners, External Staff). This is the most basic grouping and has significant implications for payroll eligibility.
2. **Employee Subgroup:** A further breakdown of Employee Groups (e.g., within "Active Employees," you might have "Full-Time," "Part-Time," "Contractual"). This allows for finer distinctions in how payroll rules are applied.

Why it matters for payroll: The combination of Employee Group and Employee Subgroup is fundamental. It's often used to determine the default values for the payroll area, as well as influence wage types, time evaluation, and benefits

processing. Think of it as the primary filter for payroll processing rules.

Payroll Area Assignment

This is where the Enterprise and Personnel structures converge for payroll. The Payroll Area is a grouping of employees for whom payroll is processed together. It's typically defined by a combination of Personnel Area, Personnel Subarea, Employee Group, and Employee Subgroup. You also assign a "Payday Rule" here, determining when payroll is run and when employees are paid.

Key Considerations:

1. **Payroll Frequency:** Monthly, bi-weekly, weekly? This is dictated by the Payroll Area.
2. **Payday:** When do employees receive their paychecks?
3. **Processing Sequence:** How are different payroll areas processed in relation to each other?

Accurate assignment here ensures that employees are grouped logically for payroll runs, minimizing the risk of errors and facilitating efficient processing.

The Heart of Calculation: Wage Types and Their Configuration

Wage types are the building blocks of payroll. They represent every component of an employee's remuneration – from basic salary and bonuses to deductions like taxes and social security contributions. Proper wage type configuration is the core of SAP HCM payroll.

Understanding Wage Types

In SAP HCM, wage types are four-character alphanumeric codes. Each wage type is assigned a description and has a set of attributes that define how it behaves in payroll processing. These attributes dictate:

1. **Processing Class:** Controls how the wage type is processed in different payroll functions (e.g., cumulation, taxability).
2. **Cumulation Class:** Determines which annual totals the wage type contributes to (e.g., gross pay, taxable income).
3. **Assessment Basis:** Defines how the wage type's value is used as a basis for other calculations.
4. **Valid for:** Specifies if the wage type is applicable for specific employee groups or subgroups.

Creating and Maintaining Wage Types (Transaction: SM30 / SM31 & PA30)

New wage types are typically created by copying existing ones and then modifying their attributes. The primary configuration table for wage types is V_T511. You can maintain wage types using transaction codes like SM30 or SM31 for table maintenance, and PA30 for assigning them to employee master data.

Standard vs. Custom Wage Types

SAP provides a set of standard wage types (e.g., /557 for net pay, /001 for basic pay). However, most organizations require custom wage types to represent specific allowances, deductions, or company-specific benefits. When creating custom wage types, always follow a naming convention and ensure they are clearly documented.

Key Wage Types to Consider:

1. **Primary Wage Types:** Represent direct remuneration (e.g., Basic Pay, Overtime, Bonus).
2. **Secondary Wage Types:** Used for internal calculations and can be generated during payroll processing (e.g., tax deductions, social security contributions).

Retroactive Changes and Wage Types

SAP HCM payroll is designed to handle retroactive changes. When an employee's master data changes (e.g., a salary increase), the system can recalculate payroll for previous periods. This is managed through wage type configuration and the payroll driver's settings.

The Logic of Calculation: Rules, Schemas, and Subschemas

This is where the "intelligence" of SAP HCM payroll comes to life. Rules, schemas, and subschemas define the sequence and logic of payroll calculations. They dictate how wage types interact, how deductions are applied, and how the final net pay is determined.

Understanding Payroll Schemas (Transaction: PE01)

A payroll schema is a sequence of payroll functions. It's a top-level structure that orchestrates the entire payroll run. Think of it as the conductor of an orchestra, directing each instrument (function) at the right time.

Schemas are divided into different sections, each responsible for specific payroll steps:

1. **Cumulation:** Aggregating wage types.
2. **Processing:** Performing calculations based on defined rules.
3. **Output:** Generating wage types for reporting and posting.
4. **Retroactivity:** Handling changes from previous periods.

Subschemas (Transaction: PE02)

Subschemas are used to modularize schemas, making them more manageable and reusable. They contain a subset of payroll functions for a specific task, such as processing a particular type of deduction or calculating taxes. This promotes a cleaner and more organized configuration.

Payroll Functions

Within schemas and subschemas, you'll find payroll functions. These are predefined operations that perform specific tasks. Examples include:

1. **P0008:** Reads basic pay from the IT0008 Infotype.
2. **P0014:** Reads recurrent payments and deductions from IT0014.
3. **ADDWT:** Adds a wage type to the output table.
4. **COLCT:** Collects wage types for cumulation.
5. **ACTIO:** Calls a subschema.

Processing Rules (Transaction: PE07)

Processing rules, often referred to as "PCRs" (Personnel Calculation Rules), are the heart of the calculation logic. They are written in a specific SAP payroll language and are called from within schemas or subschemas. PCRs define the conditions under which a wage type is processed, how its value is determined, and what happens to it.

Example Scenario: A PCR might check if an employee is eligible for a certain allowance based on their employee subgroup and then, if eligible, calculate the allowance amount based on a predefined factor.

Mastering PCRs is crucial for complex payroll scenarios. They are highly customizable and require a deep understanding of the business requirements.

Essential Components for a Smooth Payroll Run

Beyond the core configuration, several other components play a vital role in ensuring your SAP HCM payroll runs smoothly and accurately.

Infotypes Configuration (Transaction:

PA10, PA20, PA30)

Infotypes are data structures that store employee information. For payroll, critical infotypes include:

1. **IT0001:** Organizational Assignment (links employee to Enterprise and Personnel Structure).
2. **IT0008:** Basic Pay (defines base salary, pay scale types, and grades).
3. **IT0009:** Recurring Payments/Deductions (for fixed allowances and deductions).
4. **IT0014:** Additional Payments (for one-time payments like bonuses).
5. **IT0015:** Additional Payments (for specific allowances or deductions that need to be managed per period).
6. **IT0041:** Date Specifications (e.g., hire date, termination date, which impact eligibility).
7. **IT0050:** Insurance/Other Contributions.

Proper configuration of these infotypes, including their time constraints and field settings, is essential for accurate data capture and subsequent payroll processing.

Time Evaluation Configuration

(Transaction: Time Manager's Workplace - PTMW)

If your organization has complex time tracking requirements

(overtime, absences, shift work), integrating time evaluation with payroll is critical. Time evaluation processes raw time data and generates entries that are then used by payroll.

Key elements include:

1. **Work Schedules:** Defining daily, weekly, and yearly work times.
2. **Absence Types:** Configuring different types of leave (sick leave, vacation).
3. **Attendance Types:** Configuring different types of work (overtime, regular attendance).
4. **Time Evaluation Schemas:** Similar to payroll schemas, these define the logic for processing time data.

A well-configured time evaluation system ensures that actual hours worked, overtime, and absences are accurately reflected in payroll calculations.

Taxation and Statutory Deductions

This is arguably one of the most complex and critical aspects of payroll configuration. SAP HCM offers robust functionality to handle various country-specific tax laws and statutory deductions.

Key areas include:

1. **Tax Types and Authorities:** Configuring different tax authorities (e.g., federal, state, local) and the specific tax

types they levy.

2. **Tax Calculation Rules:** Setting up rules for calculating income tax, social security, and other mandatory deductions.
3. **Taxable Base Calculation:** Defining which wage types are subject to tax.
4. **Tax Forms and Reporting:** Ensuring your system can generate the necessary tax reports for compliance.

This often involves significant customization and ongoing maintenance as tax laws change.

Bank Master Data and Payment Processing

Accurate bank details are vital for direct deposit. This involves configuring bank master data and ensuring that employee bank information is captured correctly in the relevant infotypes. You'll also configure payment methods and how payroll results are passed to external banking systems for processing.

Testing and Validation: The Final Frontier

Configuration is only half the battle. Rigorous testing is paramount to ensure accuracy and prevent costly errors. A comprehensive testing strategy should include:

1. **Unit Testing:** Testing individual wage types, PCRs, and functions.
2. **Integration Testing:** Testing how different components of the payroll process interact.
3. **End-to-End Testing:** Simulating a full payroll run from data entry to payment.
4. **User Acceptance Testing (UAT):** Having end-users (HR, payroll administrators) validate the results.
5. **Regression Testing:** Ensuring that new configurations or changes haven't negatively impacted existing functionality.

Documenting test cases and results is crucial for a smooth go-live and for future reference.

Key Takeaways for SAP HCM Payroll Configuration Success

Mastering SAP HCM payroll configuration is an ongoing journey. Here are some key takeaways to guide you:

1. **Understand Your Business Requirements:** The system should reflect your organization's unique compensation and benefits policies.
2. **Start with the Foundation:** A solid understanding of Enterprise and Personnel structures is non-negotiable.
3. **Master Wage Types:** They are the language of payroll.

Therefore, a thorough understanding of the underlying principles and practical steps is paramount.

Understanding the Core Components of SAP HCM Payroll Configuration

Before diving into the specifics, it's crucial to grasp the fundamental building blocks of SAP HCM Payroll. These components work in concert to deliver accurate payroll results. Key among them are:

1. **Organizational Structure:** The foundation of your SAP HCM system, defining your company's hierarchy, departments, positions, and employee assignments. A

well-defined organizational structure is critical for accurate reporting and employee data management.

2. **Master Data:** This encompasses all employee-specific information, including personal details, organizational assignments, and crucial payroll-relevant data like basic pay, allowances, deductions, and tax information. Understanding and maintaining accurate master data is the first step towards flawless payroll.
3. **Time Management:** For many organizations, employee working hours, overtime, absences, and holidays directly impact payroll. SAP HCM's Time Management module, when integrated with Payroll, ensures that these factors are accurately accounted for.
4. **Payroll Schema:** The heart of the payroll calculation engine. Schemas are sets of rules and operations that dictate how payroll is processed. They define the sequence of calculations, the integration of different wage types, and the application of specific business logic.
5. **Wage Types:** These are the fundamental units that represent different types of earnings, deductions, and provisions. Configuring and maintaining a comprehensive list of wage types is essential for capturing all financial aspects of an employee's remuneration.
6. **Business Rules and Policies:** SAP HCM Payroll needs to reflect your company's compensation policies, bonus structures, benefits programs, and statutory compliance

requirements.

The Strategic Importance of SAP HCM Payroll Configuration

Effective SAP HCM payroll configuration goes beyond mere data entry; it's a strategic imperative that impacts several critical business functions:

1. **Cost Control and Accuracy:** Precise configuration ensures that the right amounts are paid to the right people at the right time, minimizing overpayments and underpayments. This directly impacts financial reporting and budgeting.
2. **Compliance with Regulations:** Tax laws, labor regulations, and statutory deductions vary significantly by region and country. SAP HCM Payroll must be configured to adhere to these complex legal frameworks, preventing costly penalties and legal disputes.
3. **Employee Satisfaction and Retention:** Accurate and timely payroll processing is fundamental to employee morale. Errors can lead to frustration, decreased productivity, and increased employee turnover.

5. **Data Integrity and Reporting:** Well-configured payroll data feeds into various reports and analytics, providing valuable insights into labor costs, workforce trends, and compensation benchmarks.

Key Steps in Configuring SAP HCM Payroll

The configuration process in SAP HCM Payroll is iterative and requires a systematic approach. Here are the essential steps involved:

1. Defining the Payroll Area

The payroll area is a crucial organizational unit that groups employees who are paid on the same payroll cycle. Key considerations when defining payroll areas include:

1. **Payroll Frequency:** Weekly, bi-weekly, semi-monthly, or monthly.
2. **Payment Date:** The fixed date on which employees receive their salary.
3. **Retroactive Accounting:** The period for which past payroll runs can be recalculated.
4. **Country Grouping:** This is paramount for ensuring country-specific legal requirements are met. It dictates the tax regulations, social security contributions, and

other statutory rules that apply.

SEO Consideration: When configuring payroll areas, consider keywords like "SAP payroll frequency," "SAP payment date settings," and "SAP country grouping configuration."

2. Configuring Payroll Constants

Payroll constants are parameters that are used across multiple payroll runs for a specific payroll area. These often include:

1. **Tax Authority Identifiers:** Codes for tax offices and social security institutions.
2. **Contribution Rates:** Standard rates for social security, pension funds, etc.
3. **Wage Type Assignment:** Default assignments for various wage types to specific employee groups.

These constants are typically maintained in table V_T511P and other related tables. Accuracy here is vital as these values are used repeatedly.

3. Designing the Payroll Schema (T50 / T51)

The payroll schema is the core of the calculation process. It's a sequence of operations that are executed in a specific

order during each payroll run. Key elements include:

1. **Schema Structure:** Understanding the hierarchical nature of schemas, sub-schemas, and schemas for specific countries.
2. **Operations:** These are the basic instructions that perform calculations, move data, or control the flow of processing (e.g., ADDWT for adding a wage type to the results table, COLCL for collecting results).
3. **Functions:** These are predefined sets of operations that perform common payroll tasks (e.g., ACTIO for executing a sub-schema, DTV for date calculations).
4. **Cumulations:** Setting up how wage types accumulate over time for tax and social security calculations.

LSI Keywords: SAP payroll schema configuration, SAP payroll functions, SAP payroll operations, wage type cumulation.

4. Defining and Configuring Wage Types (T5100 Series)

Wage types are the building blocks of payroll. Each wage type represents a specific earning, deduction, or provision. Proper configuration involves:

1. **Creation of New Wage Types:** Defining unique characteristics for each wage type, including its name,

description, and intended use.

2. **Assignment of Processing Classes:** These classes determine how a wage type behaves in different payroll processes, such as whether it's considered for taxation, social security, or inclusion in gross pay.
3. **Cumulation Classes:** Defining how wage types aggregate for reporting and calculation purposes.
4. **Wage Type Permissibility:** Controlling which wage types are allowed for specific employee groups or positions.
5. **Default Wage Types:** Assigning standard wage types that are applicable to all or most employees (e.g., basic pay, standard deduction).

SEO Consideration: "SAP HCM wage types," "SAP payroll processing classes," "configuring SAP payroll deductions."

5. Setting Up Indirect Valuation (T5104, T5105)

Indirect valuation allows certain wage types to be automatically generated or calculated based on other data. This is crucial for efficiency and accuracy. Common examples include:

1. **Fixed Allowances:** Automatically adding predefined allowances based on an employee's position or grade.
2. **Variable Allowances:** Calculating allowances based on

attendance or other dynamic factors.

3. **Deductions based on Other Wage Types:** For instance, a tax deduction might be indirectly valued based on taxable income.

This often involves maintaining tables like T5104 (indirect valuation of basic pay) and T5105 (indirect valuation of additional payments).

6. Configuring Symbolic Accounts and Posting to FI/CO

SAP HCM Payroll integrates seamlessly with SAP Financial Accounting (FI) and Controlling (CO) modules. Symbolic accounts act as intermediaries, mapping payroll wage types to G/L accounts in FI. This ensures accurate financial postings for payroll expenses, liabilities, and payments.

1. **Defining Symbolic Accounts:** Creating unique symbolic accounts for different categories of payroll results.
2. **Assigning Symbolic Accounts to Wage Types:** Linking specific wage types to their corresponding symbolic accounts.
3. **Configuring Posting Rules:** Defining how payroll postings are generated, including debit/credit assignments and account determination.

LSI Keywords: SAP payroll FI integration, SAP symbolic

accounts configuration, SAP payroll posting rules.

7. Handling Taxes and Statutory Deductions

This is one of the most complex areas of SAP HCM Payroll configuration, requiring deep understanding of local tax laws and social security regulations.

1. **Tax Tables:** Configuring country-specific tax tables, income tax rates, and tax brackets.
2. **Social Security Contributions:** Setting up rates and limits for various social security schemes (pension, health insurance, unemployment, etc.).
3. **Tax Declarations and Reports:** Ensuring the system can generate necessary reports for tax authorities.
4. **Tax Type and Tax Area:** Correctly assigning tax types and areas to employees based on their location and employment status.

SEO Consideration: "SAP payroll tax configuration," "SAP social security setup," "SAP payroll compliance."

8. Managing Benefits and Deductions

SAP HCM Payroll supports a wide range of employee benefits (health insurance, retirement plans) and voluntary deductions (loan repayments, union dues). Configuration

involves:

1. **Defining Benefit Plans:** Setting up different benefit options and their associated costs and contribution rules.
2. **Enrolling Employees in Benefits:** Assigning benefit plans to employees and managing their enrollment status.
3. **Configuring Deduction Wage Types:** Creating wage types for various deductions and specifying their calculation methods (fixed amount, percentage, etc.).

9. Testing and Validation

Thorough testing is non-negotiable. A comprehensive testing strategy should include:

1. **Unit Testing:** Testing individual wage types and schema functionalities.
2. **Integration Testing:** Verifying the interaction between different modules (Time Management, Payroll, FI).
3. **User Acceptance Testing (UAT):** Allowing end-users to validate the payroll results against expected outcomes.
4. **Parallel Payroll Runs:** Running the new configuration alongside the existing system to compare results and identify discrepancies.

LSI Keywords: SAP payroll testing scenarios, SAP HCM payroll validation, SAP payroll parallel runs.

10. Ongoing Maintenance and Updates

The payroll landscape is dynamic. Laws change, business policies evolve, and new employees are onboarded.

Continuous maintenance is essential:

1. **Regular Updates:** Staying abreast of SAP support packages and legal changes that require system adjustments.
2. **Auditing and Review:** Periodically reviewing configurations to ensure they remain accurate and compliant.
3. **Change Management:** Implementing a robust change management process for any modifications to the payroll configuration.

Common Challenges in SAP HCM Payroll Configuration and How to Overcome Them

Businesses often encounter hurdles during SAP HCM Payroll configuration. Awareness and proactive measures can mitigate these:

1. **Lack of Expertise:** SAP HCM Payroll is complex. Ensure your team has skilled professionals or engage with experienced SAP consultants.
2. **Inadequate Business Process Understanding:** Before configuring, thoroughly document your current payroll

processes and policies.

3. **Poor Data Quality:** Inaccurate employee master data will lead to flawed payroll results. Implement data governance policies.
4. **Scope Creep:** Clearly define the project scope and manage expectations to avoid delays and cost overruns.
5. **Underestimating Testing:** Insufficient testing is a leading cause of post-go-live issues. Allocate ample time and resources.

Leveraging SAP HCM Payroll Configuration for Business Advantage

Beyond ensuring basic functionality, a well-configured SAP HCM Payroll system can be a powerful tool for achieving business objectives:

1. **Advanced Reporting and Analytics:** Extract granular data to analyze labor costs, identify cost-saving opportunities, and inform strategic workforce planning.
2. **Streamlined Compliance:** Automate adherence to evolving tax and labor laws, reducing the risk of penalties and freeing up HR to focus on strategic initiatives.
3. **Enhanced Employee Self-Service:** Provide employees with access to their payslips and payroll-related information through SAP's Fiori or ESS/MSS portals, improving transparency and reducing HR queries.

Questions & Answers About payroll configuration guide in sap hcm

No	Question	Answer
1	What are the essential first steps for configuring payroll in SAP HCM?	Before diving into specifics, key initial steps include understanding legal and company-specific payroll requirements, setting up organizational structure (company codes, personnel areas/subareas), and defining enterprise structures. This foundational setup is crucial for accurate payroll processing.
2	How do I define payroll areas and their associated processing groups in SAP HCM?	Payroll areas are defined in SAP IMG (Implementation Guide) under 'Personnel Time Management' -> 'Payroll' -> 'Payroll' -> 'Basic Settings'. You'll set up payroll areas (e.g., monthly, bi-weekly) and then link them to specific processing groups that control the sequence of payroll runs for different employee segments.

3	What are wage types, and how are they configured for different payroll components in SAP HCM?	Wage types represent all types of remuneration and deductions (e.g., basic salary, allowances, taxes, social contributions). They are configured in SAP IMG under 'Personnel Cost Planning and Employee Remuneration' -> 'Wages and Salaries' -> 'Basic Settings' -> 'Create Wage Type'. Each wage type has specific attributes (e.g., processing class, cumulation class) that dictate how it behaves during payroll processing.
4	How does SAP HCM handle tax configuration for payroll, and what are the key considerations?	SAP HCM's tax configuration involves setting up tax authorities, tax types, and tax jurisdictions. Key considerations include understanding country-specific tax regulations, assigning appropriate tax wage types, and configuring tax calculation rules. Regular updates are vital to remain compliant with evolving tax laws.
5	What are PCRs (Personnel Calculation Rules), and why are they important in SAP HCM payroll configuration?	PCRs are the heart of SAP HCM payroll processing, defining the logic for calculations. They are written in a specific syntax and control how wage types are processed, cumulated, and how gross-to-net calculations are performed. Mastering PCRs is essential for custom payroll requirements.

6	How do I configure deductions and benefits in SAP HCM payroll?	Deductions (e.g., loan repayments, union dues) and benefits (e.g., health insurance, retirement plans) are typically configured using specific wage types. You'll set up these wage types with appropriate processing and cumulation classes, and then link them to employee master data (Infotypes like 0014/0015) for automatic calculation and deduction during payroll.
7	What is the role of employee master data (Infotypes) in payroll configuration?	Employee master data, stored in Infotypes, is crucial for payroll. Infotypes like 'Basic Pay' (0008), 'Recurring Payments/Deductions' (0014), and 'Additional Payments' (0015) hold employee-specific information that the payroll driver uses to calculate wages, deductions, and taxes for each individual.
8	How do I ensure compliance with legal requirements when configuring SAP HCM payroll?	Compliance involves thorough understanding of local labor laws, tax regulations, and social security contributions. Regular configuration reviews, use of country-specific SAP solutions (e.g., SAP Localization), and staying updated with SAP notes and legal changes are paramount to maintaining compliance.

Key ones include T500P (Payroll Areas), T510 (Basic Pay Wage Types), T511 (Wage Types), T52EL (Legal Requirements), and T591B (Cumulation Wage Types). Understanding these tables aids in troubleshooting and advanced configuration.
