**Problem 1:** If  $7 + x = 15$ , what is the value of  $x$ ? **Thinking Process:** We need to find the number that, when added to 7, gives us 15. This is the same as asking  $15 - 7$ . **Equation:**  $7 + x = 15$  **Solution:** Subtract 7 from both sides of the equation:  $x = 15 - 7$  **Answer:**  $x = 8$ . **Problem 2:** If  $y - 3 = 9$ , what is the value of  $y$ ? **Thinking Process:** We need to find the number from which, if we subtract 3, we get 9. This is the same as asking  $9 + 3$ . **Equation:**  $y - 3 = 9$  **Solution:** Add 3 to both sides of the equation:  $y = 9 + 3$  **Answer:**  $y = 12$ . **Problem 3:** If  $4 * z = 24$ , what is the value of  $z$ ? **Thinking Process:** We need to find the number that, when multiplied by 4, gives us 24. This is the same as asking  $24 / 4$ . **Equation:**  $4 * z = 24$  **Solution:** Divide both sides of the equation by 4:  $z = 24 / 4$  **Answer:**  $z = 6$ .

## 2. Two-Step Equations

Once you're comfortable with finding a single missing number, you can move on to solving equations that require two steps. **Simple Two-Step Algebra Problems:** **Problem 1:** If  $2a + 3 = 11$ , what is the value of  $a$ ? **Thinking Process:** We need to isolate 'a'. First, get rid of the '+ 3' by subtracting 3 from both sides. Then, get rid of the '2 \*' by dividing both sides by 2. **Equation:**  $2a + 3 = 11$  **Step 1 (Subtract 3):**  $2a = 11 - 3 \Rightarrow 2a = 8$  **Step 2 (Divide by 2):**  $a = 8 / 2$  **Answer:**  $a = 4$ . **Problem 2:** If  $5b - 7 = 18$ , what is the value of  $b$ ? **Thinking Process:** Similar to the previous problem, first address the '- 7' by adding 7 to both sides, then address the '5 \*' by dividing both sides by 5. **Equation:**  $5b - 7 = 18$  **Step 1 (Add 7):**  $5b = 18 + 7 \Rightarrow 5b = 25$  **Step 2 (Divide by 5):**  $b = 25 / 5$  **Answer:**  $b = 5$ .

# Common Types of Simple Mathematical Problems with Answers

Let's explore some of the most common categories of simple mathematical problems, providing clear explanations and illustrative examples. These examples are designed to be accessible and to reinforce fundamental principles.

## 1. Arithmetic Operations: The Four Pillars

Arithmetic is the most basic branch of mathematics, dealing with numbers and the operations performed on them. The four fundamental operations are addition, subtraction, multiplication, and division.

### a) Addition Problems

Addition involves combining two or more numbers to find their sum. It's about putting quantities together.

**Example:** If you have 5 apples and your friend gives you 3 more apples, how many apples do you have in total?

**Problem:**  $5 + 3 = ?$

**Answer:** 8 apples

**Explanation:** We are combining the initial 5 apples with the 3 additional apples. Therefore, 5 plus 3 equals 8.

### b) Subtraction Problems

Subtraction is the process of taking away a quantity from another. It helps us find the difference between two numbers or the remaining amount.

**Example:** Sarah had 10 cookies and ate 4 of them. How many cookies does

she have left?

**Problem:**  $10 - 4 = ?$

**Answer:** 6 cookies

**Explanation:** We start with 10 cookies and remove the 4 cookies Sarah ate. The remaining amount is 10 minus 4, which equals 6.

### c) Multiplication Problems

Multiplication is a faster way of performing repeated addition. It's useful when you have multiple groups of the same size.

**Example:** A baker makes 6 batches of cookies, and each batch contains 12 cookies. How many cookies did the baker make in total?

**Problem:**  $6 \times 12 = ?$

**Answer:** 72 cookies

**Explanation:** We are adding 12 cookies six times ( $12 + 12 + 12 + 12 + 12 + 12$ ). Multiplication provides a shortcut: 6 groups of 12 cookies equals 72 cookies.

### d) Division Problems

Division is the process of splitting a quantity into equal parts or groups. It's the inverse operation of multiplication.

**Example:** You have 24 pencils and want to share them equally among 4 friends. How many pencils will each friend receive?

**Problem:**  $24 \div 4 = ?$

**Answer:** 6 pencils

**Explanation:** We are dividing the total of 24 pencils into 4 equal groups. Each group will have 24 divided by 4, which is 6 pencils. This is equivalent to asking: what number multiplied by 4 equals 24 (which is 6).

## 2. Word Problems: Applying Math to Real-World Scenarios

Word problems, also known as story problems, present mathematical challenges in a narrative format. They require careful reading and interpretation to extract the relevant numerical information and identify the operation needed to solve the problem. These are excellent for developing **math comprehension**.

### a) Simple Addition Word Problem

**Example:** A farmer has 15 sheep and buys 8 more sheep. How many sheep does the farmer have now?

#### Problem Breakdown:

1. Initial sheep: 15
2. Bought more sheep: 8
3. Operation needed: Addition (combining quantities)

**Solution:**  $15 + 8 = 23$

**Answer:** The farmer has 23 sheep now.

### b) Simple Subtraction Word Problem

**Example:** A library has 50 books. If 12 books are checked out, how many books are left in the library?

#### Problem Breakdown:

1. Total books: 50
2. Books checked out: 12
3. Operation needed: Subtraction (finding the remainder)

**Solution:**  $50 - 12 = 38$

**Answer:** There are 38 books left in the library.

### **c) Simple Multiplication Word Problem**

**Example:** A small shop sells lemonade for \$2 per cup. If they sell 30 cups of lemonade in an hour, how much money did they earn?

#### **Problem Breakdown:**

1. Price per cup: \$2
2. Number of cups sold: 30
3. Operation needed: Multiplication (total earnings = price per unit × number of units)

**Solution:**  $\$2 \times 30 = \$60$

**Answer:** They earned \$60.

### **d) Simple Division Word Problem**

**Example:** A group of 5 friends wants to share a pizza that has 20 slices equally. How many slices will each friend get?

#### **Problem Breakdown:**

1. Total slices: 20
2. Number of friends: 5
3. Operation needed: Division (distributing equally)

**Solution:**  $20 \div 5 = 4$

**Answer:** Each friend will get 4 slices.

## **3. Percentage Problems: Understanding**

# Proportions

Percentages are a way of expressing a number as a fraction of 100. They are widely used in finance, statistics, and everyday contexts like sales and discounts. Understanding **percentage calculations** is a key life skill.

## a) Finding a Percentage of a Number

**Example:** What is 25% of 80?

### Method 1: Convert percentage to decimal

1. Convert 25% to a decimal:  $25 / 100 = 0.25$
2. Multiply the decimal by the number:  $0.25 \times 80 = 20$

### Method 2: Convert percentage to fraction

1. Convert 25% to a fraction:  $25/100 = 1/4$
2. Multiply the fraction by the number:  $(1/4) \times 80 = 80/4 = 20$

**Answer:** 25% of 80 is 20.

## b) Calculating Discounts

**Example:** A shirt originally costs \$40. It is on sale for 15% off. What is the sale price?

### Step 1: Calculate the discount amount

1. Discount percentage: 15%
2. Original price: \$40
3. Discount amount = 15% of \$40 =  $0.15 \times \$40 = \$6$

### Step 2: Subtract the discount from the original price

1. Sale price = Original price - Discount amount
2. Sale price =  $\$40 - \$6 = \$34$

**Answer:** The sale price of the shirt is \$34.

## 4. Basic Geometry Problems: Shapes and Space

Simple geometry problems often involve calculating areas and perimeters of basic shapes. These are fundamental for understanding spatial relationships.

### a) Perimeter of a Rectangle

The perimeter is the total distance around the outside of a shape.

**Formula:**  $\text{Perimeter} = 2 \times (\text{length} + \text{width})$

**Example:** A rectangular garden is 10 meters long and 5 meters wide. What is its perimeter?

**Solution:**  $\text{Perimeter} = 2 \times (10 + 5) = 2 \times 15 = 30$  meters

**Answer:** The perimeter of the garden is 30 meters.

### b) Area of a Rectangle

The area is the amount of space inside a two-dimensional shape.

**Formula:**  $\text{Area} = \text{length} \times \text{width}$

**Example:** Using the same rectangular garden (10 meters long and 5 meters wide), what is its area?

**Solution:**  $\text{Area} = 10 \times 5 = 50$  square meters

**Answer:** The area of the garden is 50 square meters.

### c) Area of a Triangle

**Formula:**  $\text{Area} = (1/2) \times \text{base} \times \text{height}$

**Example:** A triangle has a base of 8 cm and a height of 6 cm. What is its area?

**Solution:**  $\text{Area} = (1/2) \times 8 \times 6 = 4 \times 6 = 24$  square cm

**Answer:** The area of the triangle is 24 square cm.

## The Enduring Relevance of Simple Mathematical Problems

The importance of simple mathematical problems extends far beyond the classroom. In our personal lives, we constantly use basic arithmetic for managing money, cooking, planning trips, and understanding everyday information. |--------|--------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1      | What's 15% of 200? I need a quick way to calculate this!                       | To find 15% of 200, you can multiply 200 by 0.15 (which is 15% as a decimal). So, $200 * 0.15 = 30$ . The answer is 30.                                                                                                |
| 2      | If I have 3 apples and buy 5 more, then eat 2, how many apples do I have left? | Start with 3 apples. Add the 5 you bought, so $3 + 5 = 8$ apples. Then, subtract the 2 you ate, so $8 - 2 = 6$ apples. You have 6 apples left.                                                                         |
| 3      | How do I find the average of 10, 20, and 30? This average thing is confusing!  | To find the average, add all the numbers together and then divide by how many numbers there are. So, $(10 + 20 + 30) / 3 = 60 / 3 = 20$ . The average is 20.                                                           |
| 4      | What's the perimeter of a rectangle with a length of 8 cm and a width of 5 cm? | The perimeter of a rectangle is calculated by adding up all its sides, or $2 * (\text{length} + \text{width})$ . So, $2 * (8 \text{ cm} + 5 \text{ cm}) = 2 * 13 \text{ cm} = 26 \text{ cm}$ . The perimeter is 26 cm. |
| 5      | I need to split \$50 equally among 4 friends. How much does each person get?   | To split \$50 equally among 4 friends, you divide the total amount by the number of friends. $\$50 / 4 = \$12.50$ . Each friend gets \$12.50.                                                                          |
| 6      | What is 7 squared ( $7^2$ )? What does that little '2' mean?                   | 7 squared ( $7^2$ ) means multiplying 7 by itself. So, $7 * 7 = 49$ . The answer is 49.                                                                                                                                |
| 7      | If a shirt costs \$25 and is on sale for 20% off, how much do I save?          | To find the savings, calculate 20% of \$25. 20% as a decimal is 0.20. So, $\$25 * 0.20 = \$5$ . You save \$5.                                                                                                          |
| 8      | What is the area of a square with sides of 6 inches each?                      | The area of a square is calculated by side * side. So, $6 \text{ inches} * 6 \text{ inches} = 36 \text{ square inches}$ . The area is 36 sq in.                                                                        |

|----|---------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9  | I have a fraction $\frac{3}{4}$ . How do I convert it to a decimal? | To convert a fraction to a decimal, you divide the top number (numerator) by the bottom number (denominator). So, $3 \div 4 = 0.75$ . The decimal is 0.75. |
| 10 | What is the next number in the sequence: 2, 4, 6, 8, ...?           | This is a simple addition sequence where 2 is added to each previous number. So, the next number after 8 is $8 + 2 = 10$ .                                 |
