Understanding the Shift: CB/IEC 60950, CE EN 60950 Discontinued, and the Rise of CUI

Inc.

For anyone involved in the design, manufacturing, or sale of electronic equipment, keeping abreast of evolving safety standards is not just a good idea – it's a necessity. These standards are the bedrock of product safety, ensuring that devices don't pose risks of electric shock, fire, or other hazards to users and their surroundings. For years, the globally recognized safety standard for information technology equipment (ITE) was IEC 60950, with its European counterpart, EN 60950, and its North American equivalent, CB Scheme (IEC 60950-1), being the go-to benchmarks. However, a significant transition has taken place, rendering these standards essentially discontinued. This shift, and what it means for manufacturers, particularly in relation to components from leading suppliers like CUI Inc., is a crucial topic to explore.

The discontinuation of IEC 60950 (and its regional derivatives like CE EN 60950) might sound alarming, but it's actually a positive evolution. It signifies the harmonization and modernization of safety regulations across the globe. The new, overarching standard is IEC 62368-1, which addresses a broader range of potential hazards, including those from energy sources beyond traditional electricity, like

lasers and chemicals. This article will delve into the reasons behind the discontinuation of CB/IEC 60950 and CE EN 60950, explain the implications of this transition, and highlight how companies like CUI Inc. are adapting and ensuring their products meet the latest safety requirements.

The Legacy of IEC 60950 and its European Counterpart

Before we dive into the new era, it's important to acknowledge the long and impactful history of IEC 60950 and its related standards. For decades, IEC 60950-1 was the definitive international standard for the safety of information technology equipment and related accessories. It laid out stringent requirements for insulation, creepage and clearance distances, overcurrent protection, and other critical safety aspects to prevent electrical hazards.

What was CB/IEC 60950?

The CB Scheme (Certification Body Scheme) is an international multilateral mutual recognition system operated by the International Electrotechnical Commission for Electrical Equipment (IECEE). Under the CB Scheme, a CB Test Certificate issued by a

National Certification Body (NCB) in one member country is recognized by NCBs in other member countries. This significantly streamlined the process of gaining product certification and market access globally. IEC 60950-1 was a cornerstone standard within the CB Scheme, making it a de facto global requirement for many electronic products.

CE EN 60950: The European Stamp of Approval

In Europe, EN 60950 was the harmonized European standard that aligned with IEC 60950-1. When a product met the requirements of EN 60950, it was presumed to comply with the essential safety requirements of relevant European Union directives, such as the Low Voltage Directive. Achieving CE marking, which is mandatory for many products sold in the European Economic Area, often relied on demonstrating compliance with EN 60950.

Why Were These Standards Discontinued?

The world of electronics has evolved dramatically since the inception of IEC 60950. We now have a much wider array of product types, including those

with features and functionalities that the older standard wasn't designed to fully encompass. The primary driver for the discontinuation of IEC 60950 was the need to create a more comprehensive and future-proof standard that could address the evolving landscape of technology and associated risks. This led to the development of IEC 62368-1, a hazard-based standard that focuses on the potential energy sources within a product and the likelihood of harm to users, regardless of the product's specific function.

The Dawn of IEC 62368-1: A New Paradigm in Safety

The transition from 60950 to 62368-1 represents a significant paradigm shift in how product safety is assessed. Instead of being prescriptive, IEC 62368-1 is hazard-based. This means it doesn't dictate specific constructional requirements but rather focuses on identifying potential energy sources (electrical, chemical, and thermal) and assessing the risk they pose to different user classifications.

What is IEC 62368-1?

IEC 62368-1 is the international standard for the safety of audio/video, information and communication

technology equipment, and related information technology equipment. It's often referred to as the "hazard-based standard" or "future-proof standard" because it's designed to cover a much broader range of products and technologies than its predecessors.

Key features of IEC 62368-1 include:

1. **Hazard-Based Approach:** It identifies potential hazards from energy sources (electrical, thermal, chemical, radiation) and classifies them based on the potential for harm.
2. **User Classification:** It defines different user classifications (ordinary persons, trained persons, and skilled persons) to tailor safety requirements.
3. **Performance-Based Requirements:** Instead of dictating specific methods, it sets performance criteria that must be met to prevent harm.
4. **Broader Scope:** It's designed to cover a wider range of products, including emerging technologies.

The Transition Timeline: Phased Adoption and End Dates

The transition from 60950 to 62368-1 has been a phased process. Manufacturers have been given ample time to adapt their designs and obtain new

certifications. However, deadlines have been set for the full adoption of IEC 62368-1 and the discontinuation of legacy standards.

1. **Europe:** The EN 60950-1 standard was officially withdrawn in June 2019. Products placed on the market after this date must comply with EN 62368-1.
2. **North America:** While not a strict discontinuation in the same way as Europe, the industry has largely moved towards UL 62368-1 (the North American adoption of IEC 62368-1). Compliance with older UL 60950-1 standards is becoming increasingly difficult to maintain for new products or significant design changes.
3. **Global CB Scheme:** The IECEE CB Scheme has also transitioned, with IECEE Operational Circulars (OCs) reflecting the move to 62368-1.

The key takeaway here is that if you are designing new products or making significant modifications to existing ones, compliance with IEC 60950 and its regional variants is no longer the primary objective. The focus must be on IEC 62368-1.

Implications for Manufacturers and CUI Inc.

This significant shift in safety standards has profound implications for every company involved in the electronics supply chain. Manufacturers of finished products need to ensure their entire system, including all components, meets the latest requirements. This is where the role of component suppliers becomes critical.

The Importance of Component Compliance

Components are the building blocks of electronic devices. If a component doesn't meet the relevant safety standards, the entire end product will fail to achieve certification. This means manufacturers must:

1. **Source Compliant Components:** Choose suppliers who can provide components that are certified to IEC 62368-1.
2. **Verify Certifications:** Don't just take a supplier's word for it. Request and review the relevant CB Test Certificates, Declarations of Conformity, and other supporting documentation.

3. **Understand Component-Level Risk:** Recognize how individual components contribute to the overall hazard profile of the end product.

CUI Inc.'s Proactive Approach to Safety Standards

Companies like CUI Inc., a leading global supplier of power and interconnect components, have been at the forefront of adapting to these evolving safety standards. Recognizing the impending discontinuation of 60950 and the ascendancy of 62368-1, CUI Inc. has been diligently working to ensure its extensive product portfolio meets the new requirements.

What Does "CUI Inc. CB/IEC 60950 CE EN 60950 Discontinued CUI Inc." Mean?

This phrase essentially encapsulates the situation: component manufacturers like CUI Inc. are acknowledging that their products, which may have previously been certified to IEC 60950 and CE EN 60950, are now being re-evaluated and certified to the newer IEC 62368-1 standard. It signifies that while older products might still bear historical

certifications, newer product lines and updated versions are being designed and tested with IEC 62368-1 compliance as the primary goal.

CUI Inc.'s Commitment to IEC 62368-1

CUI Inc. has a comprehensive strategy for addressing IEC 62368-1 compliance, which includes:

1. **Design and Engineering:** Their engineering teams are designing new products with the principles of IEC 62368-1 in mind, focusing on hazard mitigation and performance-based safety.

3. **Certifications and Documentation:** They actively pursue and provide necessary certifications and documentation, including CB Test Reports and CB Certificates, to support their customers' own product compliance efforts. Many of their AC-DC power supplies, for example, are now certified to IEC 62368-1.
4. **Product Portfolio Updates:** CUI Inc. is continually updating its product offerings to include solutions that are compliant with the latest standards. This means that customers can often

find direct replacements or upgraded versions of components that were previously compliant with 60950, but now meet 62368-1.

Navigating the Transition: Tips for Manufacturers

For manufacturers of end products, successfully navigating this transition requires a strategic approach:

1. Understand the New Standard

Educate your engineering and compliance teams about the fundamentals of IEC 62368-1, its hazard-based approach, and user classifications. This will help you identify potential risks in your product designs.

2. Review Your Bill of Materials (BOM)

Go through your current product's BOM and identify all components that were certified to 60950. For new designs or significant revisions, you'll need to find equivalent or upgraded components that are certified to 62368-1.

3. Partner with Compliant Component Suppliers

Work closely with reputable component suppliers like CUI Inc. who have a clear strategy for IEC 62368-1 compliance. Ensure they can provide the necessary documentation to support your product certification.

4. Plan for Re-certification

Understand that your end product will likely need to be re-certified to IEC 62368-1. Factor the time and cost of this process into your product development timeline.

5. Stay Informed

Safety standards and regulations are not static. Continuously monitor updates and changes from standards bodies and regulatory agencies.

Conclusion: Embracing a Safer Future

The discontinuation of CB/IEC 60950 and CE EN 60950 is not an end, but a crucial step forward in ensuring the safety of electronic products in an

increasingly complex technological landscape. IEC 62368-1, with its hazard-based approach, offers a more robust and future-proof framework for safety assessment. For manufacturers, this transition necessitates a proactive approach to component selection, design, and certification. Companies like CUI Inc. are demonstrating their commitment to this evolution by ensuring their product lines are compliant with the latest standards, providing their customers with the confidence they need to bring safe and reliable products to market. CB IEC 60950, CE EN 60950: Discontinued Standards and the Rise of IEC 62368-1

For decades, the safety of information technology equipment (ITE) and audio/video (A/V) equipment has been governed by a robust set of international standards. Among the most prominent were **CB IEC 60950** (for ITE) and **CE EN 60950** (the European harmonized version). These standards, along with their regional counterparts, have been instrumental in ensuring product safety and facilitating global trade. However, the landscape of product safety is constantly evolving, driven by technological advancements and the emergence of new product categories. Consequently, **CB IEC 60950 CE EN 60950 discontinued** is a crucial phrase for

manufacturers, testing laboratories, and regulatory bodies alike. This article delves into the reasons behind their discontinuation, explores the transition to the new standard, and highlights the implications for businesses involved in the manufacturing and distribution of electronic equipment.

The Legacy of IEC 60950

The International Electrotechnical Commission (IEC) standard IEC 60950, titled "Information technology equipment – Safety – Part 1: General requirements," has served as a cornerstone for ITE safety for many years. Its European counterpart, EN 60950, was the harmonized version adopted by the European Union, granting CE marking. Similarly, the CB Scheme (IEC System for Conformity to Standards) facilitated international acceptance of test reports based on IEC 60950. This standard addressed a wide range of potential hazards associated with ITE, including electrical shock, energy, fire, heat, mechanical, and radiation hazards.

The strength of IEC 60950 lay in its prescriptive nature. It provided detailed requirements and test methods, making it relatively straightforward to assess compliance. Manufacturers understood the benchmarks, and testing laboratories had clear

guidelines. This predictability fostered a stable market and allowed for efficient product development and certification processes. The **CB IEC 60950 certification** was a globally recognized mark of quality and safety.

Why the Discontinuation? The Evolving Technology Landscape

The primary driver for the discontinuation of IEC 60950 is the rapid evolution of technology. The lines between different product categories have blurred, and new types of equipment have emerged that don't fit neatly into the traditional definitions of ITE or A/V equipment. Consider the proliferation of connected devices, smart home technology, and the increasing integration of computing power into everyday appliances. These advancements presented challenges for the existing standards.

One significant issue was the inherent "prescriptive" nature of IEC 60950. While once a strength, it struggled to adapt to the dynamic nature of emerging technologies. New materials, power sources, and interaction methods often fell outside the scope of the original standard. Furthermore, the focus of IEC 60950 was primarily on protecting users from direct

hazards. However, modern electronic devices often involve indirect hazards and a greater emphasis on user interaction and energy transfer.

The distinction between ITE and A/V equipment, which IEC 60950 and its predecessor IEC 60065 addressed respectively, became increasingly problematic. Many devices now incorporate elements of both, leading to complex compliance requirements and potential overlaps or gaps in safety assessments.

The Dawn of IEC 62368-1: A Hazard-Based Approach

In response to these challenges, the IEC developed a new, comprehensive standard: **IEC 62368-1**. This standard, titled "Audio/visual, information and communication technology equipment – Part 1: Safety requirements," represents a paradigm shift in product safety. Instead of being prescriptive, IEC 62368-1 adopts a **hazard-based approach**.

This means the standard focuses on identifying potential hazards and then determining how to control those hazards to prevent injury. It categorizes energy sources into three levels (Class 1, 2, and 3) and defines requirements based on the potential for harm. This flexible approach allows the standard to

encompass a much wider range of products and technologies, including those that were not envisioned when IEC 60950 was originally developed.

The hazard-based approach also considers different types of users and their potential exposure to hazards. For instance, it differentiates between ordinary users, trained users, and experienced persons, applying appropriate safety measures for each. This leads to a more nuanced and effective risk assessment.

The Transition Period: Navigating the End of CB IEC 60950 CE EN 60950 Discontinued

The transition from IEC 60950 to IEC 62368-1 has been a phased process, with specific deadlines for different regions and product categories.

Understanding these timelines is crucial for manufacturers to avoid compliance issues. The official end of the transition period, often referred to as the **withdrawal date**, signifies that products can no longer be certified against the older standards and must comply with IEC 62368-1 to achieve certification and the relevant marks, such as CE marking.

For regions that relied on the CB Scheme, the discontinuation of **CB IEC 60950** means that CB Certificates and CB Test Reports for new products must now be based on IEC 62368-1. This has required significant updates to testing methodologies and training for personnel at CB Testing Laboratories (CBTLs).

Similarly, for the European Union, the end of the transition period for EN 60950-1 meant that products placed on the market must comply with the harmonized version of IEC 62368-1 (EN 62368-1). This also affects the requirements for **CE marking**. Products no longer conforming to EN 60950-1 will not be able to claim compliance with the Low Voltage Directive (LVD) and thus cannot bear the CE mark.

Implications for Manufacturers and Businesses

The discontinuation of IEC 60950 and the mandatory adoption of IEC 62368-1 have several key implications for businesses:

Product Redesign and Re-engineering

Many products designed and certified under IEC 60950 may require redesign or re-engineering to

meet the requirements of IEC 62368-1. This can involve changes to component selection, circuit design, enclosure materials, and power supply configurations. The hazard-based approach might necessitate a deeper understanding of the potential energy transfer within the product and how it can be controlled.

Testing and Certification Costs

The transition necessitates new testing and certification activities. Manufacturers will need to engage with accredited testing laboratories that are equipped to perform testing according to IEC 62368-1. This may involve additional costs associated with testing, certification fees, and potential product modifications.

Supply Chain Management

Manufacturers need to ensure that their entire supply chain is aware of and compliant with the new standard. This includes component suppliers who must provide parts that meet IEC 62368-1 requirements. Effective communication and collaboration with suppliers are essential.

Market Access

For products to be legally placed on the market in regions that have adopted IEC 62368-1 as their national standard (or its harmonized version, like EN 62368-1 in Europe), compliance with the new standard is non-negotiable. Failure to comply can result in products being rejected at customs, market recalls, and significant reputational damage.

Opportunities for Innovation

While the transition presents challenges, it also offers opportunities. The hazard-based approach of IEC 62368-1 encourages innovation in product design. Manufacturers can leverage this flexibility to develop safer, more efficient, and more user-friendly products that might have been constrained by the prescriptive nature of older standards. It also fosters a more consistent approach to safety across different product types.

Key Concepts Related to the Transition

1. **IEC 62368-1:2018 (3rd Edition):** The latest iteration of the standard, which is the current reference for most regulatory bodies.
2. **Harmonized Standard:** EN 62368-1 is the

harmonized version in the EU, which allows for the presumption of conformity with the Low Voltage Directive.

3. **CE Marking Transition:** The CE mark signifies conformity with relevant EU directives. With the discontinuation of EN 60950-1, compliance with EN 62368-1 is now essential for LVD compliance.
4. **CB Scheme Updates:** The CB Scheme has updated its procedures to include IEC 62368-1, ensuring that CB Certificates issued are based on the new standard.
5. **CUI Inc. and Compliance:** While CUI Inc. is a component manufacturer and not a finished product manufacturer, they are deeply involved in ensuring their products (like power supplies and AC-DC converters) comply with the relevant safety standards. This means CUI products intended for use in ITE or A/V equipment will now be tested and certified to IEC 62368-1. Manufacturers using CUI components can therefore rely on their suppliers' compliance to help meet their own product certification needs.

Looking Ahead: Continuous Evolution

in Product Safety

The discontinuation of **CB IEC 60950 CE EN 60950** is not an endpoint but rather a significant milestone in the ongoing evolution of product safety. The adoption of IEC 62368-1 reflects a more adaptable and forward-looking approach to ensuring the safety of electronic equipment in an increasingly complex technological world. For manufacturers and all stakeholders in the electronics industry, staying informed about these evolving standards and proactively embracing compliance is paramount for continued market access, consumer trust, and the ultimate goal of protecting users from harm.

The shift to a hazard-based methodology underscores a commitment to a deeper understanding of risk and a more integrated approach to safety across diverse product categories. Businesses that embrace this change and invest in the necessary expertise and product development will be well-positioned for success in the global marketplace.

Questions & Answers About cbiec 60950 ceen60950 discontinued

cui inc

No	Question	Answer
1	What's the main reason CB IEC 60950 and CE EN 60950 standards are being discontinued?	These standards are being superseded by IEC/EN 62368-1, which is a newer, hazard-based standard that covers both audio/video, information technology, and communication technology equipment, offering a more unified approach to safety.
2	When was the official withdrawal date for IEC 60950 and EN 60950?	While exact dates can vary slightly by region and specific versions, the transition period has been ongoing, with a general expectation for full adoption of 62368-1 to replace 60950/60065 by December 2020 in many markets, though compliance timelines can extend.
3	How does the hazard-based approach of IEC/EN 62368-1 differ from the prescriptive nature of 60950?	IEC/EN 60950 was largely prescriptive, detailing specific constructional requirements. The new 62368-1 is hazard-based, focusing on identifying potential energy sources and associated risks, allowing for more flexibility in design while still ensuring safety.

4	What does 'CUI Inc' have to do with the discontinuation of CB IEC 60950 CE EN 60950?	CUI Inc, as a manufacturer of power supplies and electronic components, would have had products certified to the older IEC 60950 and EN 60950 standards. Their products now need to comply with the newer IEC/EN 62368-1 standard to meet market access requirements.
5	Will products that were previously compliant with IEC 60950/EN 60950 still be sold?	There's typically a transition period, but eventually, products seeking new certifications or entering new markets will need to meet the IEC/EN 62368-1 standard. Existing inventory might have some grace periods, but manufacturers are actively transitioning their product lines.
6	What are the key benefits of the new IEC/EN 62368-1 standard over the discontinued 60950?	The main benefits include a more unified standard for a wider range of products, flexibility for innovative designs, and a greater focus on user safety by considering various energy transfer hazards, not just electrical ones.

What is a Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF?

A PDF (Portable Document Format) is one of the most popular and reliable digital document formats in the world. Developed by Adobe in the early 1990s, the PDF format was designed to solve a common problem in digital documentation: maintaining a document's original appearance regardless of the device, software, or operating system used to open it. A Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF ensures that text alignment, fonts, images, colors, charts, and layouts remain exactly as intended by the creator.

Unlike editable document formats such as DOCX or TXT, PDFs are primarily intended for viewing, sharing, and printing. This makes them ideal for professional, academic, and official purposes. A Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF is often used for ebooks, study materials, tutorials, research papers, manuals, contracts, brochures, reports, and official documents where content integrity is essential.

One of the strongest advantages of a Cbiec 60950

Ceen60950 Discontinued Cui Inc PDF is its universal compatibility. PDFs can be opened on Windows, macOS, Linux, Android, iOS, and even directly in modern web browsers without the need for special software. This universal support ensures that anyone receiving the file will see the exact same content, regardless of their platform or device.

In addition, PDFs support advanced features such as embedded fonts, vector graphics, interactive elements, hyperlinks, forms, digital signatures, bookmarks, and metadata. This makes the Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF not just a static document, but a powerful and flexible medium for information distribution. Security features such as password protection, encryption, and permission control further enhance the reliability of PDFs for sensitive or proprietary content.

There are many reasons why individuals and organizations prefer the Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF format over other file types. First, PDFs preserve formatting perfectly, ensuring that documents look professional and

consistent. Second, they are compact and easy to share via email, cloud storage, or messaging platforms. Third, PDFs are print-ready, meaning what you see on the screen is exactly what you get on paper.

Another key advantage is long-term accessibility. PDFs are widely recognized as a standard format for digital archiving. Many libraries, universities, and government institutions rely on PDFs to store documents for years or even decades. A Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF created today is likely to remain accessible far into the future.

How to create a Cbiec 60950 Ceen60950 Discontinued Cui Inc PDF?

2. Print to PDF Feature:

Most modern operating systems, including Windows, macOS, and Linux, offer a built-in “Print to PDF” option. This feature allows you to convert virtually any printable document into a PDF file. When printing, simply select “Print to PDF” as the printer. This method is especially useful for converting web pages, invoices, or application outputs into a PDF without additional software.

3. Online PDF Conversion Tools:

There are numerous web-based services that enable quick and easy PDF creation. Websites such as Smallpdf, PDF24, iLovePDF, Zamzar, and Sejda allow users to upload documents and convert them into PDFs within seconds.
