So, grab your apron, preheat your smoker, and let's dive into the art of smoking a brisket!

Choosing Your Brisket: The Foundation of Flavor

Before you even think about firing up the smoker, the first crucial step is selecting the right brisket. This isn't just any piece of beef; it's the star of the show, and its quality will dictate the success of your cook.

Understanding the Cut: Packer vs. Flat

Brisket comes from the chest of the cow and is a well-exercised muscle, which is why it needs low and slow cooking to break down the connective tissues and become tender. There are two main parts to a whole brisket, often referred to as a "packer brisket":

1. **The Point:** This is the fattier, thicker end of the brisket. It's rich in intramuscular fat (marbling) and connective tissue, making it incredibly flavorful and ideal for dishes like burnt ends.
2. **The Flat:** This is the leaner, thinner end. It's still delicious but can be prone to drying out if not cooked carefully.

For your first few cooks, a whole packer brisket is often recommended as it provides both textures and is more forgiving. If you're looking for a leaner option or have limited time, a "brisket flat" or "first cut" is available, but be mindful of its tendency to dry out.

What to Look for at the Butcher

When you're at the butcher shop or grocery store, keep an eye out for these key indicators of a quality brisket:

1. **Marbling:** Look for good intramuscular fat distribution throughout the meat. This "marbling" is what melts during the cook, adding moisture and flavor. You want to see white flecks of fat woven through the red meat.
2. **Thickness:** Aim for a brisket that is relatively uniform in thickness, especially the flat. This will help it cook more evenly. A thickness of around 2-3 inches is ideal.
3. **Color:** The meat should have a deep red color. Avoid anything that looks pale or dull.
4. **Grade:** If available, opt for USDA Prime or Choice grades. Prime has the most marbling, followed by Choice. Select is the lowest grade and can be tougher.
5. **Weight:** For smoking, a brisket between 12-18 pounds is a good starting point. This size often has a good balance of point and flat.

Prep Work: Setting the Stage for Success

Once you've got your brisket, it's time to get it ready for its smoky transformation. Proper preparation is key to achieving that coveted brisket bark and ensuring optimal moisture retention.

Trimming the Fat: A Delicate Balance

Brisket has a thick cap of fat, usually on one side. You'll want to trim this down, but not entirely remove it. The goal is to leave about a quarter-inch of fat. This fat will render down during the long cook, basting the meat and adding incredible flavor and moisture.

1. **Fat Cap:** Trim any excessively thick areas of the fat cap down to about ¼ inch. You want it to be an even layer.
2. **Hard Fat:** Remove any hard, waxy fat that doesn't look like it will render. This can be found between the point and the flat, or along the edges.
3. **Deckle:** This is a thick, tough piece of fat often found in the "deckle" area (the thickest part of the point). Trim it away.
4. **Shaping:** You can also trim any thin, ragged edges of the meat that might burn during the cook. Some pitmasters like to round off the corners to prevent them from drying out.

The Mighty Rub: Building the Bark

This is where you start to build the foundation of your brisket's flavor. While there are countless brisket rub recipes, the classic Texas-style rub is simple and effective: salt and black pepper.

1. **The "Dalmatian" Rub:** This is the traditional choice. Coarsely ground black pepper and kosher salt, in roughly equal parts. The coarse grind of the pepper creates texture and helps form a beautiful bark.
2. **Applying the Rub:** Don't be shy! Generously coat the entire surface of the brisket with your rub. You can even get it under the fat cap if you've trimmed it slightly. Let the rub sit on the brisket for at least 30 minutes, or even overnight in the refrigerator, to allow it to penetrate the meat.
3. **Beyond the Basics:** While salt and pepper are king, some pitmasters add a touch of garlic powder, onion powder, or even a hint of cayenne for a little kick. Experiment once you've mastered the basics.

The Smoker: Your Gateway to Smoky Perfection

The smoker is where the magic truly happens. The low and slow heat, combined with wood smoke, transforms a tough cut of beef into a tender masterpiece. There are many types of smokers, each with its own nuances.

Choosing Your Smoker Type

1. **Offset Smoker:** The traditional choice for many pitmasters, these smokers have a firebox separate from the cooking chamber, allowing for consistent temperature control.
2. **Pellet Smoker/Grill:** These are incredibly user-friendly, offering precise temperature control and convenience. They use wood pellets to generate heat and smoke.
3. **Kamado Grill (e.g., Big Green Egg):** These ceramic grills are versatile and can maintain low temperatures for smoking.

4. **Electric Smoker:** A good option for beginners, these are easy to use and maintain consistent temperatures.

Wood Selection: The Essence of Smoke

The type of wood you use will impart a distinct flavor to your brisket. For beef, richer woods are generally preferred.

1. **Hickory:** A classic choice for beef, providing a strong, smoky flavor that pairs well with brisket.
2. **Oak:** Another excellent option, offering a milder but still distinct smoky profile that is less overpowering than hickory. Post oak is particularly popular for Texas brisket.
3. **Mesquite:** Known for its intense smoky flavor, mesquite can be a bit strong for beginners. Use it sparingly or mix it with milder woods.
4. **Fruitwoods (Apple, Cherry):** These offer a sweeter, milder smoke that can be nice for brisket, especially when blended with oak or hickory.

Start with a combination of two types of wood, or stick to one that you enjoy. You'll typically use wood chunks or logs in offset smokers and wood pellets in pellet grills.

Temperature and Time: The Slow and Low Mantra

The golden rule of brisket smoking is "low and slow." This means maintaining a consistent temperature in your smoker, generally between 225°F and 275°F (107°C - 135°C).

Target Temperature: Aim for an internal temperature of around 200°F to 205°F (93°C - 96°C) for the brisket to become probe-tender. This is just a guideline; the true test is feel.

Cooking Time: Brisket is notoriously unpredictable when it comes to cooking time. A general rule of thumb is 1 to 1.5 hours per pound, but this can vary significantly. Don't rush it! A 12-pound brisket could take anywhere from 12 to 18 hours, or even longer.

The Smoke Ring and The Stall: Navigating Brisket's Quirks

As your brisket cooks, you'll encounter a couple of phenomena that are part and parcel of the smoking process.

The Smoke Ring: A Sign of Deliciousness

That beautiful pinkish-red ring just beneath the bark is called the smoke ring. It's formed by the reaction of nitric oxide (from the smoke) and myoglobin (a protein in the meat). The longer the meat is exposed to smoke at the right temperature, the deeper the smoke ring.

The Brisket Stall: Patience is a Virtue

Around the 150°F to 165°F (65°C - 74°C) internal temperature mark, you'll likely experience "the stall." The brisket's internal temperature will stop rising, sometimes for several hours. This happens due to evaporative cooling – moisture from the meat's surface evaporates, cooling it down.

Don't panic! This is a natural part of the process. Pushing through the stall is crucial for a tender brisket. The two most common methods to overcome it are the Texas Crutch (wrapping) and the "no wrap" method.

Wrapping the Brisket: The Texas Crutch and Beyond

Wrapping your brisket is a popular technique to push through the stall, retain moisture, and speed up the cooking process. It also helps to soften the bark if it's getting too dark.

The Texas Crutch: Butcher Paper is Your Friend

This is the most common and recommended method. Once your brisket has developed a good bark and hit the stall (around 160°F-165°F internal temperature), you'll wrap it tightly.

1. **Materials:** Unwaxed pink butcher paper is the preferred material for its breathability, which allows the bark to continue to develop. Aluminum foil can also be used, but it will create a much softer bark and can steam the meat more.
2. **The Wrap:** Lay out a large sheet of butcher paper. Place the brisket on top and wrap it tightly, like a present, ensuring there are no gaps. You might need two layers of paper.
3. **Return to Smoker:** Place the wrapped brisket back on the smoker until it reaches your target internal temperature of 200°F-205°F and is probe-tender.

The No-Wrap Method: For the Brave of Heart

Some purists prefer to smoke their brisket unwrapped. This method requires more attention to bark development and can take longer. If you choose this route, be prepared to spritz your brisket with liquid (like apple cider vinegar or beef broth) periodically to keep it moist.

The Final Frontier: Rest and Slice

You've done it! Your brisket is cooked to perfection. But before you slice into that glorious piece of meat, there's one more critical step: resting.

The Importance of the Rest

Resting allows the juices, which have been pushed to the surface during cooking, to redistribute throughout the brisket. Skipping this step will result in dry, less flavorful meat as all the moisture will run out onto your cutting board.

1. **Duration:** A brisket needs a long rest, ideally 2-4 hours, or even longer.
2. **Method:** After you pull the brisket from the smoker, keep it wrapped in its butcher paper. Place it in a cooler (without ice!), an oven turned off, or a warming oven set to a low temperature (around 150°F-170°F).

Slicing for Maximum Enjoyment

Once rested, it's time to slice and serve. The key to slicing brisket is to go against the grain.

1. **Identifying the Grain:** Brisket has two distinct grains – one running in one direction in the flat and another running in the opposite direction in the point. You'll need to identify these and slice accordingly.
2. **Thickness:** Slice the brisket into pencil-thick slices (about 1/4 inch).
3. **Presentation:** Arrange your brisket slices on a platter and admire your handiwork.

Troubleshooting Common Brisket Problems

Even with the best intentions, things can sometimes go awry. Here are a few common issues and how to address them:

1. **Dry Brisket:** This is usually due to overcooking, insufficient fat cap, or not resting long enough. Ensure you're cooking to temperature and feel, and never skip the rest!
2. **Tough Brisket:** This indicates it wasn't cooked long enough to break down the connective tissues. Brisket is better slightly overcooked than undercooked.
3. **Hard Bark:** If your bark is too hard or burnt, you can spritz it with water or beef broth more frequently during the cook or wrap it sooner.
4. **No Smoke Ring:** While visually appealing, a lack of a smoke ring doesn't necessarily mean your brisket isn't delicious. It can be affected by various factors like the type of smoker, wood, and even the meat itself.

Beyond the Basics: Elevating Your Brisket Game

Once you've mastered the fundamentals, you can start experimenting and refining your brisket-smoking techniques.

1. **Injecting:** Some pitmasters inject their brisket with beef broth, butter, or Worcestershire sauce to add extra moisture and flavor.
2. **Spritzing:** Regularly spritzing your brisket with liquids like apple cider vinegar, beef broth, or water can help keep it moist and build a better bark.
3. **Burnt Ends:** A true delicacy! After cooking and slicing the point, cube the richer pieces and toss them in barbecue sauce, then smoke them again until caramelized and tender.
4. **Experiment with Woods and Rubs:** Don't be afraid to try different wood combinations and rub variations to find your personal favorite flavor profile.

Smoking a brisket is a journey, not a destination. Each cook will teach you something new, and with practice, you'll develop your own unique style and preferences. So embrace the process, enjoy the delicious aromas filling your backyard, and most importantly, savor every mouthwatering bite of your perfectly smoked brisket. Happy smoking!

Smoking a brisket is more than just a barbecue ritual—it's a craft honed over time, rooted in tradition and refined through science. At its core, brisket smoking is about transforming a tough, connective-rich cut of meat into tender, juicy, and deeply flavorful perfection. The process hinges on slow, low-temperature cooking, typically between 225°F and 250°F, which allows collagen in the meat to break down gradually, resulting in a melt-in-your-mouth texture that defines professional brisket. The journey begins with proper preparation: selecting the right brisket, usually the flat cut from the chest, which balances ample fat and meat, is essential. Trimming excess fat while leaving a generous layer preserves moisture, and seasoning with a dry rub—often a balanced blend of salt, brown sugar, smoked paprika, garlic powder, and black pepper—sets the foundation for complex flavor development. This rub adheres best when applied evenly and allowed to penetrate overnight, enhancing both taste and texture. Smoking itself demands patience and precision. A charcoal or wood-fired smoker is ideal, maintaining consistent heat and introducing subtle, smoky notes that infuse the meat over hours, sometimes as long as 12 to 18 hours. Low and slow is the mantra—high heat can dry out the brisket, while too low a

temperature risks undercooking. Monitoring internal temperature closely, aiming for 195°F to 205°F, ensures optimal tenderness without losing structure. One of the key insights in mastering brisket smoking is understanding the role of smoke and moisture. Using wood chips like mesquite, hickory, or apple adds aromatic depth, but it's crucial to avoid over-smoking, which can produce bitter, acrid flavors. Pulling the brisket at the right moment—when the meat separates easily from the bone—signals peak doneness, allowing it to rest properly to redistribute juices and maximize tenderness. Beyond the grill or smoker, smoking brisket offers remarkable versatility. Once cooked, it can be sliced thin for sandwiches, wrapped in foil for a quick pulled pork-style meal, or shredded into tacos and burritos. Its rich, savory profile also lends itself well to glazes, barbecue sauces, and even fusion dishes that blend regional flavors. This adaptability makes brisket a staple in both casual backyard cookouts and formal culinary presentations. The benefits of smoking a brisket extend beyond taste. The slow cooking process encourages deeper flavor penetration, creating an intensely satisfying experience that satisfies cravings and nourishes with whole, unprocessed meat. Additionally, homemade smoked brisket reduces reliance on heavily processed meats, aligning with growing consumer interest in clean, natural ingredients and mindful eating. Looking ahead, the future of brisket smoking reflects broader trends in food culture—an increasing emphasis on slow food, craftsmanship, and cultural authenticity. As more people explore regional barbecue traditions, brisket remains a centerpiece, evolving through innovation while preserving time-honored techniques. Whether cooked in a backyard smoker or a commercial pit, smoking a brisket continues to be a deeply rewarding experience—one that connects generations through flavor, tradition, and the simple joy of sharing a meal made with care.

Mastering the Art: How to Smoke a Brisket to Perfection

The humble beef brisket, a notoriously tough cut of meat from the lower chest of a cow, transforms into a culinary masterpiece when treated with the respect it deserves: smoke. Smoking a brisket is less a recipe and more a ritual, a journey that rewards patience and attention to detail with unbelievably tender, juicy, and flavorful results. This guide will walk you through every crucial step, from selecting the perfect brisket to achieving that coveted smoky bark and melt-in-your-mouth interior. Whether you're a beginner embarking on your first smoke or an experienced pitmaster looking to refine your technique, understanding the science and art behind smoking a brisket is key.

Choosing the Right Brisket: The Foundation of Flavor

The journey to a great smoked brisket begins long before the smoker fires up. The selection of your brisket is paramount. You'll typically find two main cuts: the 'flat' (or 'decker') and the 'point' (or 'second cut'). Most briskets are sold as a whole packer cut, containing both the flat and the point, separated by a layer of fat. The flat is leaner and more uniformly shaped, while the point is fattier and often has a thicker fat cap. For beginners, a whole packer is often recommended as it's more forgiving due to the intramuscular fat in the point, which helps keep the meat moist during the long cooking process. When selecting, look for:

1. **USDA Prime or Choice Grade:** These grades indicate a higher degree of marbling (intramuscular fat), which is crucial for moisture and flavor in a long smoke.
2. **Fat Cap Thickness:** Aim for a fat cap that's at least ¼ inch thick on one side. This fat will render down during the smoke, basting the meat and contributing to its succulent texture.
3. **Flexibility:** A brisket that bends easily when you pick it up is usually a good sign of tenderness.

4. **Even Thickness:** While not always achievable, a brisket with relatively even thickness throughout will cook more uniformly.

Trimming the Brisket: Sculpting for Success

Proper trimming is an often-overlooked but critical step. Trimming removes excess hard fat that won't render, shapes the brisket for better smoke penetration, and prepares it for seasoning. You'll need a sharp boning or filet knife. The goal isn't to remove all the fat, but to sculpt it.

The Trimming Process:

1. **Remove the Hard Fat:** Locate the thick, chewy, white fat that's typically found on the underside and between the flat and the point. Shave this off until you have a thin, even layer.
2. **Shape the Edges:** Round off any sharp edges to create a smoother surface for the smoke to adhere to. This also helps prevent the edges from drying out.
3. **Trim the Fat Cap:** Leave about ¼ inch of fat on the top side of the brisket. This fat cap will render and self-baste the meat.
4. **Separate the Point and Flat (Optional):** Some pitmasters prefer to separate the point from the flat after smoking, or even before. If you choose to trim them apart, leave a thin layer of fat connecting them.

Seasoning Your Brisket: The Salt and Pepper Foundation

Brisket is a cut that shines with simple seasonings. The classic Texas-style rub is famously minimalistic, relying on coarse salt and freshly cracked black pepper. This allows the beef and smoke flavors to take center stage. However, you can experiment with other additions.

Classic Texas-Style Rub:

1. **Coarse Salt:** Kosher salt or coarse sea salt is ideal. The larger crystals help create a flavorful crust.
2. **Coarsely Ground Black Pepper:** Freshly ground pepper offers the best flavor. A 50/50 ratio of salt to pepper is a good starting point.

Application Technique:

There's no need for a binder like mustard or oil for a traditional brisket rub. The moisture from the meat is usually enough for the rub to adhere. Apply a generous, even coating of your salt and pepper mixture all over the brisket, ensuring all sides are covered. Don't be shy; the long cook time will break down the salt.

Other Seasoning Considerations:

While salt and pepper are king, some pitmasters like to add a touch of garlic powder or onion powder. You can also experiment with a more complex rub that includes paprika, chili powder, or brown sugar. However, be mindful that sugar can contribute to a darker bark, but if overdone, it can burn.

The Smoking Process: Patience is a Virtue

This is where the magic happens. Smoking a brisket is a low and slow affair, typically taking anywhere from 8 to 18 hours, depending on the size of the brisket and the smoker's temperature. The goal is to reach an internal

temperature that breaks down the tough connective tissues (collagen) into gelatin, resulting in a tender and moist product.

Choosing Your Smoker:

A variety of smokers can be used, each imparting a unique flavor. Popular choices include:

1. **Offset Smokers:** The traditional choice, offering excellent smoke control and flavor.
2. **Pellet Grills:** Offer convenience and consistent temperature control with various wood pellet flavor options.
3. **Kamado Grills:** Versatile and excellent at holding temperature, suitable for smoking.
4. **Electric Smokers:** User-friendly and great for consistent temperatures, though they may produce less intense smoke flavor.

Wood Selection:

The type of wood you use will significantly impact the brisket's flavor profile. Popular choices for beef include:

1. **Oak:** The quintessential brisket wood, providing a balanced, medium smoke flavor.
2. **Hickory:** Offers a stronger, more robust smoke flavor that pairs well with beef.
3. **Mesquite:** Delivers a very intense, earthy smoke flavor. Use sparingly, as it can be overpowering.
4. **Pecan:** A milder, sweeter smoke that's a good alternative to hickory.

Smoking Temperature:

The ideal smoking temperature for brisket is between 225°F and 275°F (107°C to 135°C). Lower temperatures will result in a longer cook time but can yield incredibly tender results. Higher temperatures will speed up the process but increase the risk of drying out the meat.

The Stall: Understanding and Overcoming It

The 'stall' is a phenomenon in low-and-slow barbecue where the brisket's internal temperature plateaus and stops rising for an extended period, often between 150°F and 165°F (65°C to 74°C). This is caused by evaporative cooling – the moisture on the surface of the meat is evaporating, which cools it down faster than the heat from the smoker can penetrate. Don't panic when the stall hits; it's a normal part of the process.

Strategies to Push Through the Stall:

1. **The Texas Crutch (The Wrap):** This is the most common and effective method. Once the brisket reaches the stall, wrap it tightly in butcher paper or foil. Butcher paper allows for some breathability, resulting in a crispier bark, while foil creates a tighter seal, leading to a more steamed, tender product and often a darker bark.
2. **Increase Smoker Temperature:** Some pitmasters will slightly increase their smoker's temperature after the stall, but this should be done cautiously.
3. **Open the Vents (Offset Smokers):** Increasing airflow can sometimes help push through the stall.
4. **Patience:** Sometimes, the best approach is simply to wait it out.

The Probe-Tender Test: Knowing When It's Done

The ultimate test of brisket doneness is not an internal temperature, but rather feel. While an instant-read thermometer is essential for monitoring, the true indicator of a perfectly cooked brisket is tenderness.

How to Perform the Probe-Tender Test:

1. **Insert a Thermometer Probe or Skewer:** At the thickest part of the brisket (usually the flat), gently insert a thermometer probe, skewer, or even a toothpick.
2. **Feel for Resistance:** The probe should slide in with very little to no resistance, similar to how it would enter a jar of peanut butter. If you feel any significant toughness or resistance, the brisket needs more time.
3. **Test in Multiple Spots:** Check tenderness in several areas to ensure the entire brisket is cooked evenly.

The internal temperature for a probe-tender brisket typically falls between 195°F and 205°F (90°C to 96°C), but this is a guideline, not a rule. Focus on the feel.

The Crucial Rest: Allowing Flavors to Meld

This is arguably the most important step after cooking and often the most difficult to adhere to: the rest. A properly rested brisket allows the juices, which have been pushed towards the surface during cooking, to redistribute back into the meat. Skipping or shortening the rest will result in a dry, less flavorful brisket.

Resting Methods:

1. **The Cooler Rest:** Once the brisket is probe-tender, remove it from the smoker, keeping it wrapped, and place it in an empty, pre-warmed cooler. You can add some towels on top of the wrapped brisket to help insulate it. A rest of at least 2-4 hours is ideal, but a brisket can safely rest in a cooler for up to 6-8 hours.
2. **The Oven Rest:** You can also rest the brisket in a very low oven (around 150°F to 170°F) if you don't have a cooler.

During the rest, the internal temperature of the brisket will slowly drop, but it will remain hot enough to continue the tenderizing process and allow the flavors to meld.

Slicing and Serving: The Grand Finale

Once your brisket has rested, it's time to slice and serve. The way you slice is as important as any other step in the process.

Slicing Technique:

1. **Against the Grain:** This is paramount. Brisket has two distinct grain directions – one in the flat and one in the point. You'll need to identify the direction of the muscle fibers. Slicing against the grain shortens these fibers, making the meat significantly more tender.
2. **Slice Thickness:** Aim for slices that are about ¼ inch thick. Thicker slices can sometimes be tougher if not perfectly cooked.
3. **Separate the Point and Flat:** If you haven't already, now is a good time to separate the point from the flat. The point is fattier and can be cubed for 'burnt ends' or sliced as well.

Serving Suggestions:

Smoked brisket is a star on its own. Serve it with classic barbecue accompaniments like coleslaw, potato salad, pickles, and a good quality barbecue sauce on the side (though many purists prefer to let the brisket flavor speak for itself). The rendered fat from the point can be mixed back in to add extra moisture and flavor to the sliced flat.

Troubleshooting Common Brisket Issues

Even with the best intentions, things can go awry. Here are some common issues and how to address them:

1. **Dry Brisket:** Likely caused by insufficient fat cap, overcooking, or inadequate resting. Ensure you leave enough fat, cook to probe-tender, and rest thoroughly.
2. **Tough Brisket:** Usually means it hasn't cooked long enough to break down connective tissues. Push through the stall and cook until probe-tender.
3. **Burnt Bark:** Too high a smoking temperature or smoking for too long without wrapping can lead to a bitter, burnt crust. Try lower temperatures or wrap earlier.
4. **No Smoke Ring:** A smoke ring is caused by a chemical reaction between nitric oxide from the smoke and myoglobin in the meat. It's aesthetic, not indicative of flavor. A good smoke ring is enhanced by an acidic binder (like apple cider vinegar) and proper airflow.

Conclusion: The Reward of Dedication

Smoking a brisket is a labor of love, a culinary marathon that demands patience, precision, and a bit of intuition. But the reward – a smoky, tender, flavorful masterpiece that brings people together – is immeasurable. By understanding the importance of selecting the right cut, proper trimming, a simple yet effective seasoning, controlled smoking, and that crucial rest, you're well on your way to achieving brisket nirvana. So fire up your smoker, embrace the process, and prepare to impress yourself and everyone lucky enough to share your incredible smoked brisket.

Questions & Answers About how to smoke a brisket

No	Question	Answer
1	What's the secret to getting a really great brisket bark?	A killer bark comes from a good binder (like mustard or Worcestershire sauce) and a generous rub with coarse salt and black pepper. The key is low and slow cooking, allowing the rub to caramelize and form that dark, flavorful crust.
2	Do I need to wrap my brisket, and if so, when and with what?	Yes, wrapping is usually recommended, especially for longer smokes. Wrap it in butcher paper or foil when the bark has formed and the brisket reaches an internal temperature of around 160-165°F (71-74°C). This helps push through the stall and keeps the brisket moist.
3	What's the best temperature to smoke a brisket?	Most pitmasters aim for a consistent smoker temperature between 225°F and 275°F (107°C and 135°C). Lower temperatures yield a longer cook time but can result in a more tender brisket. Aim for consistency!
4	How do I know when my brisket is finally done?	Doneness is determined by feel, not just temperature. A perfectly cooked brisket will probe tender in multiple spots, meaning a thermometer or probe slides in with very little resistance, like butter. The internal temperature should be between 195°F and 205°F (90°C and 96°C).
5	What's the deal with the 'brisket stall' and how do I beat it?	The stall is a period where the brisket's internal temperature plateaus, often around 150-165°F (65-74°C). This is due to evaporative cooling. Wrapping the brisket (as mentioned above) is the most common and effective way to push through it.
6	Should I trim my brisket before smoking, and how much?	Yes, trimming is crucial for even cooking and rendering. Trim off excess hard fat from the deckle side (about 1/4 inch thick), leaving a thin, even layer of fat. Also, remove any silver skin from the fat cap side.
7	What wood is best for smoking brisket?	Hickory and oak are classic choices for brisket, offering a robust and balanced smoke flavor. Pecan is another popular option that provides a slightly sweeter profile. Mesquite can be used, but it's quite strong and best used sparingly.
