your definitive resource for all things related to the 50A65-288 gas valve, drawing heavily on the official [White Rodgers 50A65-288 installation guide](#) and common service bulletins.

Understanding the White Rodgers 50A65-288 Gas Valve

The White Rodgers 50A65-288 is a single-stage, automatic gas control valve designed for use with natural gas or LP gas. Its primary function is to regulate the flow of gas to the furnace burners, ensuring a safe and efficient combustion process. Key components include the main gas valve, the pilot safety valve, and the pressure regulator. The valve is typically operated by an electric solenoid, triggered by the furnace's control board.

When the thermostat calls for heat, the furnace's control board sends a signal to the gas valve. This signal energizes the main valve solenoid, allowing gas to flow to the pilot burner. Once the pilot flame is established and its flame sensor detects it, a thermal switch or other safety mechanism within the pilot safety valve opens. This then allows the main gas valve to open, supplying gas to the main burners. When the thermostat is satisfied, the control board de-energizes the main valve solenoid, shutting off gas to the main burners and subsequently the pilot.

It also covers potential obstructions in the gas manifold.

Inconsistent Heating or Shut-offs

Intermittent operation can be caused by a variety of factors, including fluctuating gas pressure, faulty limit switches, or issues with the control board. The manual's troubleshooting section will help differentiate between these possibilities and guide you towards isolating the gas valve as the potential

culprit if other components are ruled out.

Gas Pressure Issues

Incorrect gas pressure is a significant concern. The manual provides the correct inlet and outlet pressure specifications for your 50A65-288 valve.
