Mastering the Art of Multiplying Fractions: A Comprehensive Guide to Word Problems

The world of fractions can often feel like a tangled maze. But fear not, intrepid learners! Understanding how to multiply fractions, especially within the context of word problems, is a skill that unlocks a vast array of real-world applications, from calculating ingredients in a recipe to determining the area of a room. This comprehensive guide will navigate you through the intricacies of multiplying fractions in word problems, equipping you with the knowledge and strategies needed to confidently tackle these mathematical challenges.

The Power of Multiplying Fractions: A Deeper Look

Multiplying fractions might seem like a simple operation, but it serves as the foundation for solving complex real-world problems. Here's why: •

Scaling and Proportions: Multiplying fractions allows us to find portions of a whole or determine how much larger or smaller a quantity becomes when scaled up or down. This is essential for tasks like adjusting recipes, calculating discounts, or figuring out the cost of a portion of a product. •

Finding Areas and Volumes: The area of a rectangle, for instance, is

calculated by multiplying its length and width. When these dimensions are expressed as fractions, the ability to multiply fractions is indispensable. Similarly, volume calculations rely heavily on multiplying fractions. • *Probability and Statistics*: Determining the probability of multiple events occurring relies on multiplying the probabilities of each individual event. These probabilities are often expressed as fractions, highlighting the crucial role of fraction multiplication in understanding chance.

Demystifying Fraction Multiplication: Key Concepts

Before diving into word problems, let's reinforce the fundamental rules of multiplying fractions: **1. Multiply the Numerators**: Multiply the top numbers (numerators) of the fractions together. **2. Multiply the Denominators**: Multiply the bottom numbers (denominators) of the fractions together. **3. Simplify the Result**: If possible, simplify the resulting fraction by finding the greatest common factor (GCF) of the numerator and denominator and dividing both by it. **Example**: Multiplying $\frac{1}{2}$ and $\frac{2}{3}$: $(\frac{1}{2}) * (\frac{2}{3}) = (1 * 2) / (2 * 3) = \frac{2}{6}$ Simplifying $\frac{2}{6}$ by dividing both numerator and denominator by 2: $\frac{2}{6} = \frac{1}{3}$

Tackling Fraction Word Problems: A Step-by-Step Approach

The key to conquering fraction word problems lies in understanding the problem's context and applying the right strategy. Here's a systematic approach: **1. Identify the Problem**: Read the problem carefully and identify what information is provided and what needs to be found. Look for key phrases like "of," "part of," "a portion," or "what fraction." **2. Translate into Fractions**: Represent the given information as fractions. For example, "half" translates to $\frac{1}{2}$, "three-quarters" translates to $\frac{3}{4}$, and so on. **3. Set Up the Equation**: Determine which operation is needed based on the

problem's context. For multiplication word problems, you'll need to multiply two or more fractions together. **4. Solve the Equation:** Multiply the fractions as outlined earlier, simplifying the result if possible. **5. Interpret the**

Solution: Ensure your answer makes sense in the context of the problem.

Example: • **Problem:** A recipe calls for $\frac{1}{4}$ cup of flour, but you only have $\frac{1}{3}$ of that amount. How much flour do you have? **Solution:** • **Identify the**

problem: We need to find $\frac{1}{3}$ of $\frac{1}{4}$ cup of flour. • **Translate into**

fractions: " $\frac{1}{3}$ of" means multiplication. • *Set up the equation:* $(\frac{1}{3}) * (\frac{1}{4})$

• *Solve the equation:* $(\frac{1}{3}) * (\frac{1}{4}) = (1 * 1) / (3 * 4) = \frac{1}{12}$ • **Interpret the solution:** You have $\frac{1}{12}$ cup of flour.

Mastering the Art of Word Problems with Worksheets

Fraction word problems worksheets are invaluable tools for practicing and solidifying your understanding. Here's how they can help you: • **Varied**

Problems: Worksheets typically offer a diverse range of word problems, covering different scenarios and contexts, allowing you to encounter multiple approaches to fraction multiplication. • *Gradual Difficulty:* Many worksheets introduce problems with increasing complexity, enabling you to build confidence and develop mastery gradually. • **Immediate Feedback:**

Most worksheets include answer keys, providing instant feedback and helping you identify areas where you need additional practice. • **Self-**

Assessment: Working through a worksheet allows you to assess your understanding and identify areas for improvement before moving on to more advanced concepts. *Visualizing the Process: A Sample Worksheet*

Problem: A painter used $\frac{2}{5}$ of a can of paint to cover $\frac{1}{3}$ of a wall. How much paint will he need to cover the entire wall? **Solution:** • *Identify the*

problem: We need to determine how much paint is needed to cover the whole wall, given the amount used for a portion. • *Translate into fractions:* The painter used $\frac{2}{5}$ of the paint for $\frac{1}{3}$ of the wall. • **Set up the equation:**

We need to find the total paint needed, so we'll divide the amount used ($\frac{2}{5}$) by the fraction of the wall covered ($\frac{1}{3}$). This is the same as

multiplying by the reciprocal of $\frac{1}{3}$, which is $\frac{3}{1}$. • **Solve the equation:** $(\frac{2}{5}) * (\frac{3}{1}) = (2 * 3) / (5 * 1) = \frac{6}{5}$ • **Interpret the solution:** The painter will need $\frac{6}{5}$ of a can of paint to cover the entire wall. **Table:** This table summarizes the key information from the problem and the solution: | Information | **Fraction** | ||| Paint used | $\frac{2}{5}$ | | Wall covered | $\frac{1}{3}$ | | Paint needed for whole wall | $\frac{6}{5}$ |

Beyond Multiplying Fractions: Exploring Related Themes

1. Dividing Fractions: While multiplying fractions is a core concept, understanding how to divide fractions is equally important. Dividing fractions involves multiplying by the reciprocal of the divisor. **Example:** Divide $\frac{1}{2}$ by $\frac{1}{4}$. $\frac{1}{2} \div \frac{1}{4} = \frac{1}{2} * \frac{4}{1} = \frac{4}{2} = 2$ 2. **Mixed Numbers:** Word problems often involve mixed numbers, which are combinations of whole numbers and fractions. To multiply mixed numbers, first convert them into improper fractions, then multiply as usual. **Example:** Multiply $1\frac{1}{2}$ and $2\frac{1}{3}$. • Convert mixed numbers to improper fractions: $1\frac{1}{2} = \frac{3}{2}$, $2\frac{1}{3} = \frac{7}{3}$. • Multiply the improper fractions: $(\frac{3}{2}) * (\frac{7}{3}) = (3 * 7) / (2 * 3) = \frac{21}{6}$. • Simplify the result: $\frac{21}{6} = \frac{7}{2} = 3\frac{1}{2}$. **3. Real-World Applications:** Understanding fraction multiplication and division has numerous real-world applications, including: • **Cooking and Baking:** Scaling recipes up or down based on the number of servings. • **Finance and Budgeting:** Calculating discounts, interest rates, or proportions of a budget. • **Construction and Design:** Measuring and calculating areas, volumes, and materials needed for construction projects. • **Science and Technology:** Analyzing data, interpreting results, and performing calculations in various scientific fields.

Mastering Multiply Fractions Word Problems: Your Essential Worksheet Guide

Fractions. They can feel like a mathematical mystery for many students, and when you add word problems into the mix, it's understandable why some might feel a little intimidated. But here's a secret: multiplying fractions in word problems isn't as daunting as it seems. In fact, with the right approach and plenty of practice, it can become one of the more straightforward and even enjoyable areas of math. This is where a good ****multiply fractions word problems worksheet**** becomes your best friend. Think of it as your personalized guide, a stepping stone to building confidence and fluency with these types of problems. Whether you're a student struggling to grasp the concept, a teacher looking for engaging practice materials, or a parent wanting to support your child's learning, you've come to the right place. We're going to dive deep into what makes these worksheets so valuable, how to tackle them effectively, and why they are crucial for mastering fraction multiplication in real-world scenarios.

Why Word Problems Matter for Fraction Multiplication

Before we get to the nitty-gritty of worksheets, let's talk about *why* we even bother with word problems. Math isn't just about numbers on a page; it's about understanding how those numbers apply to the world around us. Multiply fractions word problems help bridge that gap. They allow us to see how concepts like "half of a third" or "three-quarters of a pizza" translate into practical situations. For instance, imagine baking a cake. If a recipe calls for $\frac{2}{3}$ cup of sugar, and you only want to make half the recipe, you'll need to find $\frac{1}{2}$ of $\frac{2}{3}$ cup. This is a direct application of fraction multiplication! Without understanding how to solve these problems, applying fractions in everyday life becomes much harder.

What to Expect in a Multiply Fractions Word Problems Worksheet

A well-designed **multiply fractions word problems worksheet** will typically feature a variety of scenarios, ranging in complexity. You'll find problems that involve:

- Finding a fraction of a quantity:** This is a fundamental concept. For example, "Sarah ate $\frac{1}{4}$ of a pizza, and Mark ate $\frac{1}{3}$ of the *remaining* pizza. What fraction of the whole pizza did Mark eat?"
- Calculating portions or parts of a whole:** Problems might involve dividing something into portions. "A recipe requires $\frac{3}{4}$ cup of flour. If you want to make $\frac{2}{3}$ of the recipe, how much flour do you need?"
- Determining combined amounts or overlaps:** Sometimes, you'll need to figure out how much is left after a portion is taken, or how much of something is used by multiple people or processes.
- Problems involving measurements and distances:** These can include things like how far someone walks a fraction of a mile or how much material is needed for a project.
- Multi-step problems:** As you progress, you'll encounter problems that require more than one step, often involving finding a fraction

of a number and then performing another operation. The best worksheets will also provide clear instructions and often include a dedicated space for students to show their work. This is invaluable for understanding the thought process and identifying any sticking points.

The Core Skill: Understanding "of" in Fraction Multiplication

One of the most crucial takeaways when tackling **multiply fractions word problems** is the meaning of the word "of." In mathematics, when you see "of" in a word problem involving fractions, it almost always signals multiplication. * "What is **half of** 10?" translates to $\frac{1}{2} * 10$. * "What is **two-thirds of** 15?" translates to $\frac{2}{3} * 15$. * "What is **three-quarters of** a cake?" translates to $\frac{3}{4} * (\text{the whole cake})$. This seemingly simple translation is the key that unlocks many fraction word problems. Once you can identify this, the rest is about applying the rules of fraction multiplication.

How to Solve Multiply Fractions Word Problems: A Step-by-Step Approach

Let's break down the process of tackling these problems systematically. Having a consistent strategy will make them feel much more manageable.

Step 1: Read the Problem Carefully

This might sound obvious, but it's the most critical step. Don't just skim. Read the word problem at least twice. The first read is to get the general gist. The second read is to identify the key information and the question being asked. Underline or highlight important numbers and phrases. * **Look for keywords:** As we discussed, "of" is a big one. Also, look for words like "each," "per," "share," "remainder," "total," and "part." *

****Identify the "whole":**** What are you taking a fraction *of*? Is it a whole number, another fraction, a quantity, or a group of items? ****What is the question asking?**** What is the final answer you need to find?

Step 2: Translate the Word Problem into a Mathematical Expression

This is where you convert the story into numbers and operations. Replace the words with mathematical symbols. ***** If the problem asks for a fraction *of* a number or another fraction, you'll be multiplying. ***** If the problem involves dividing a quantity into equal parts, it might involve division, but often the multiplication is a precursor.

Step 3: Perform the Fraction Multiplication

Now, it's time to apply the rules of multiplying fractions: ****Multiply the numerators:**** The top numbers of the fractions. ****Multiply the denominators:**** The bottom numbers of the fractions. ****Simplify the resulting fraction:**** Reduce it to its lowest terms by finding the greatest common divisor (GCD) of the numerator and denominator. ****Remember:**** If you are multiplying a fraction by a whole number, convert the whole number into a fraction by placing it over 1 (e.g., 5 becomes $\frac{5}{1}$).

Step 4: Check Your Answer and Interpret It in the Context of the Problem

This is where you ensure your answer makes sense. ****Does the answer seem reasonable?**** For instance, if you're calculating a fraction of a pizza, your answer should be less than the whole pizza. ****Does the answer directly address the question asked?**** Make sure you haven't answered a slightly different question. ****Include units:**** If the problem involves measurements (like cups, miles, or hours), make sure your answer includes the correct units.

Types of Fraction Multiplication Word Problems for Practice

A good **multiply fractions word problems worksheet** will offer variety. Here are some common types you'll encounter:

1. Finding a Fraction of a Whole Number

Example: A baker has 24 eggs. He uses $\frac{2}{3}$ of them to make a cake. How many eggs did he use? **Math:** $(\frac{2}{3}) * 24 = ?$

2. Finding a Fraction of Another Fraction

Example: Maria has $\frac{3}{4}$ of a chocolate bar. She eats $\frac{1}{2}$ of *what she has*. What fraction of the *whole* chocolate bar did she eat? **Math:** $(\frac{1}{2}) * (\frac{3}{4}) = ?$

3. Problems Involving "Parts" and "Wholes" with Remainders

Example: A gardener planted $\frac{1}{5}$ of his garden with tomatoes. He then planted $\frac{1}{3}$ of the *remaining* garden with peppers. What fraction of the *entire* garden is planted with peppers? **Math:** This often requires finding the remainder first ($1 - \frac{1}{5} = \frac{4}{5}$), then multiplying that remainder by the next fraction: $(\frac{1}{3}) * (\frac{4}{5}) = ?$

Area Problems (2D Shapes) **Example:** A rectangular garden is $\frac{5}{8}$ of a mile long and $\frac{1}{2}$ of a mile wide. What is the area of the garden? **Math:** Area = Length * Width. So, $(\frac{5}{8}) * (\frac{1}{2}) = ?$

Tips for Success with Multiply Fractions

Word Problems

*****Visualize:**** Draw a picture or a diagram. For fraction problems, especially those involving parts of wholes, a visual representation can be incredibly helpful. Draw a rectangle, a circle, or a bar and shade in the fractions. *****Simplify early:**** If possible, simplify the fractions *before* multiplying. This can make the calculation much easier and reduce the chance of errors. For example, when multiplying $(2/3) \times (3/4)$, you can cancel out the 3s and simplify the 2 and 4, leading to $(1/1) \times (1/2) = 1/2$. *****Practice regularly:**** The more you practice, the more comfortable you'll become. Consistent exposure to different types of problems builds confidence and automaticity. *****Don't be afraid to ask for help:**** If you're stuck on a particular problem or concept, reach out to your teacher, a tutor, or a classmate. *****Use online resources:**** Many websites offer interactive **multiply fractions word problems worksheet** exercises with immediate feedback, which can be a great way to learn and practice.

Where to Find Great Multiply Fractions Word Problems Worksheets

The good news is that resources for **multiply fractions word problems worksheets** are abundant! *****Educational websites:**** Many popular educational platforms offer free printable worksheets covering all aspects of fraction multiplication. Search for terms like "fraction multiplication word problems PDF" or "multiplying fractions word problems grade 5/6/7" (depending on the student's level). *****Textbooks:**** Your child's math textbook is likely a primary source for these types of problems. Make sure to utilize the practice sections. *****Teacher-created materials:****

Teachers often create their own worksheets tailored to their students' specific needs. If you're a student, ask your teacher for extra practice. If you're a parent, you might find resources shared by parent groups or educational blogs. * **Online math games and apps:** Gamified learning can make practicing fraction word problems more engaging. Navigating the world of fractions can be a significant hurdle for many students, and word problems often amplify this challenge. Among the most frequently encountered operations is multiplication of fractions. To master this, students need consistent practice and well-designed learning resources. This is precisely where the power of a **multiply fractions word problems worksheet** comes into play, offering a targeted and effective approach to building confidence and proficiency.

The Crucial Role of Multiply Fractions Word Problems Worksheets

Fractions are fundamental to mathematics, underpinning concepts in algebra, geometry, and even everyday applications like cooking and finance. While understanding how to multiply fractions (e.g., $\frac{1}{2} * \frac{3}{4}$) is a core skill, applying this knowledge in practical, real-world scenarios through word problems is where true comprehension is tested and solidified. A well-crafted worksheet provides the necessary bridge between abstract mathematical rules and concrete problem-solving.

Why Word Problems Matter for Fraction Multiplication

Word problems force students to do more than just manipulate numbers. They require:

1. **Reading Comprehension:** Identifying the relevant information and the question being asked.
2. **Translational Skills:** Converting the narrative into a mathematical expression, specifically recognizing when multiplication is the appropriate operation.
3. **Conceptual Understanding:** Grasping the meaning of multiplying fractions – often representing "a part of a part."
4. **Application of Rules:** Applying the algorithm for multiplying fractions (multiplying numerators and denominators, and simplifying).

Without dedicated practice with these scenarios, students might excel at the mechanics of fraction multiplication but struggle to recognize its utility. This is why a **fraction multiplication word problems worksheet** is an indispensable tool for educators and parents alike.

Designing Effective Multiply Fractions Word Problems Worksheets

Not all worksheets are created equal. The most effective ones are designed with pedagogical principles in mind, catering to different learning styles and levels of understanding. Key elements of a strong worksheet include clarity, relevance, and a gradual increase in difficulty.

Key Features of High-Quality Worksheets

1. **Clear Language:** The wording should be straightforward, avoiding jargon or ambiguity that could confuse students.
2. **Relatable Scenarios:** Problems grounded in everyday situations (baking, sharing, measuring, distances) make the math more engaging and meaningful. For instance, a problem like "If Sarah has $\frac{3}{4}$ of a pizza and eats $\frac{1}{2}$ of it, what fraction of the whole pizza did she eat?" is more accessible than an abstract one.
3. **Varied Problem Types:** Including a mix of problems that require different interpretations of fraction multiplication. This could involve finding a fraction *of* a whole number, a fraction *of* another fraction, or problems involving unit conversions where fraction multiplication is key.
4. **Visual Aids (Optional but Recommended):** For younger learners or those who benefit from visual aids, incorporating diagrams or illustrations can significantly enhance understanding.
5. **Graduated Difficulty:** Starting with simpler problems that directly translate to multiplication and progressing to more complex, multi-step problems.
6. **Answer Key:** A comprehensive answer key is crucial for self-assessment and for teachers to quickly check student work. This also provides an opportunity for students to review their mistakes.

Targeting Specific Skills

A good worksheet might break down the practice into specific sub-skills:

1. **Fraction of a Whole Number:** Problems like "A baker uses $\frac{2}{3}$ cup of flour for each batch of cookies. If he makes 5 batches, how much flour does he use?"
2. **Fraction of a Fraction:** These are classic "part of a part" problems, such as "John spent $\frac{1}{4}$ of his allowance on a comic book. He then spent $\frac{1}{2}$ of the money he had left on candy. What fraction of his total allowance did he spend on candy?" This type is particularly important for solidifying the concept of multiplying fractions.
3. **Multiplication with Mixed Numbers:** While the core operation remains the same, converting mixed numbers to improper fractions adds an extra step that needs practice.

SEO Considerations for "Multiply Fractions Word Problems Worksheet"

For educators and parents searching for these resources online, using targeted keywords is essential. The primary search term is undoubtedly "multiply fractions word problems worksheet." However, incorporating related LSI (Latent Semantic Indexing) keywords will improve search engine visibility and reach a wider audience seeking these materials.

Effective Keyword Strategy

Beyond the main phrase, consider using variations and related terms:

1. **"fraction multiplication word problems"**
2. **"multiplying fractions worksheet pdf"** (PDFs are a popular downloadable format)
3. **"word problems on multiplying fractions with answers"**

4. **"math word problems fractions multiplication"**

6. **"real-world fraction multiplication problems"**
7. **"fraction word problems for kids"**
8. **"solving word problems with fractions"**
9. **"fraction operations word problems"**

Using these terms naturally within the content, especially in headings, introductory paragraphs, and throughout the article, will signal to search engines the comprehensive nature of the resource being discussed.

Pedagogical Approaches to Using Worksheets

A worksheet is a tool, and its effectiveness is greatly enhanced by how it's used. Educators can employ various strategies to maximize the learning from a **fraction multiplication word problems worksheet**.

Strategies for Effective Implementation

1. **Guided Practice:** Begin by working through a few problems together as a class, modeling the thinking process. This involves breaking down each word problem step-by-step, highlighting key phrases that indicate multiplication (e.g., "of," "times," "is"), and demonstrating the conversion of mixed numbers if applicable.
2. **Independent Practice:** Allow students to work through the worksheet individually or in small groups. Circulate to provide support and address misconceptions as they arise.
3. **Think-Pair-Share:** Students can tackle a problem individually, then discuss their approach and solution with a partner, before sharing their insights with the larger group.

4. **Error Analysis:** Instead of just marking answers right or wrong, encourage students to analyze their mistakes. Understanding **why** they made an error is a powerful learning opportunity. A common pitfall might be forgetting to simplify fractions, or incorrectly converting mixed numbers.
5. **Real-World Connections:** After completing the worksheet, revisit the scenarios. Ask students to brainstorm other situations where multiplying fractions might be useful. This reinforces the practical relevance of the skill. For example, discussing how a chef might use these skills to scale a recipe.

Addressing Common Difficulties

Students often struggle with:

1. **Identifying the operation:** Confusing multiplication with addition, subtraction, or division.
2. **Understanding "of":** The word "of" in fraction word problems often signifies multiplication (e.g., " $\frac{1}{2}$ of $\frac{3}{4}$ ").
3. **Working with mixed numbers:** The need to convert them to improper fractions before multiplying.
4. **Simplifying fractions:** Forgetting this final, crucial step.
5. **Interpreting the answer:** Understanding what the calculated fraction represents in the context of the word problem.

A good **multiply fractions word problems worksheet** should have problems that gradually introduce these challenges and provide ample practice for overcoming them.

Where to Find Quality Resources

Many excellent resources are available online and in educational stores. When searching, look for sites that:

1. Offer downloadable PDFs.
2. Provide answer keys.
3. Categorize by grade level.
4. Feature a variety of problem types.

Teachers often share their self-created materials on platforms like Teachers Pay Teachers, and many reputable educational websites offer free printable worksheets.

Questions & Answers About multiply

fractions word problems worksheet

No	Question	Answer
1	What are the most common real-world scenarios where multiplying fractions appears in word problems?	You'll often find fraction multiplication in problems about sharing food (e.g., eating $\frac{2}{3}$ of a pizza that's already $\frac{1}{4}$ gone), scaling recipes (e.g., making $\frac{3}{4}$ of a batch of cookies), measuring distances or lengths (e.g., walking $\frac{5}{8}$ of a mile that's $\frac{1}{2}$ paved), and calculating portions of a whole (e.g., $\frac{1}{3}$ of the students in a class are in the band).
2	How do I approach a word problem that asks to find 'a fraction of a fraction'?	When a problem asks for 'a fraction of a fraction,' like 'what is $\frac{1}{2}$ of $\frac{3}{4}$?', you simply multiply the two fractions together. Convert 'of' to multiplication: $(\frac{1}{2}) * (\frac{3}{4}) = \frac{3}{8}$.
3	When should I be looking to multiply fractions in a word problem?	Look for keywords like 'of,' 'part of,' 'portion of,' or phrases indicating you need to find a fraction of a quantity that's already a fraction or a whole number. For example, 'What is $\frac{2}{5}$ *of* the remaining amount?'
4	What's a good strategy for solving fraction multiplication word problems, especially if I get confused?	First, identify the whole quantity and the fractional part you need to find. Draw a picture or a diagram to visualize the problem. Then, translate the words into a multiplication equation and solve. Don't forget to simplify your answer if possible!
5	How do I handle word problems where I need to multiply a fraction by a whole number?	To multiply a fraction by a whole number, treat the whole number as a fraction with a denominator of 1. For example, to find $\frac{3}{4}$ of 10, you'd calculate $(\frac{3}{4}) * (\frac{10}{1}) = \frac{30}{4}$, which simplifies to 7 and $\frac{1}{2}$.

6	Are there any common mistakes to avoid when solving these worksheets?	A common mistake is adding instead of multiplying when the problem clearly indicates 'of' or a portion. Another is forgetting to simplify the final answer or not understanding what the original 'whole' represents in the problem.
7	How does multiplying fractions differ from adding or subtracting them in word problems?	Addition and subtraction of fractions in word problems typically involve combining or taking away parts of the <i>*same*</i> whole. Multiplication, however, is about finding a <i>*part of a part*</i> or scaling a quantity. The operation used depends on what the word problem is asking you to do.
8	Can you give an example of a word problem that requires multiplying fractions and how to solve it?	Sure! 'Sarah used $\frac{2}{3}$ of a bag of flour to make cookies. If the bag originally contained $\frac{5}{4}$ pounds of flour, how much flour did Sarah use?' To solve, multiply the fractions: $(\frac{2}{3}) * (\frac{5}{4}) = \frac{10}{12}$ pounds. Simplify this to $\frac{5}{6}$ pounds. Sarah used $\frac{5}{6}$ of a pound of flour.
