In other words, they need to respond to events within a guaranteed timeframe. Missing a deadline in a real-time system can have serious consequences, ranging from minor inconveniences to catastrophic failures. This is why **real-time operating systems (RTOS)** are crucial in these environments.

Examples are abundant:

1. **Automotive:** Engine control units, anti-lock braking systems

- (ABS), airbags, infotainment systems.
2. **Aerospace:** Flight control systems, navigation systems, communication systems.
 3. **Medical Devices:** Pacemakers, infusion pumps, vital sign monitors.
 4. **Industrial Automation:** Robotics, programmable logic controllers (PLCs), process control systems.
 5. **Consumer Electronics:** Smart appliances, digital cameras, gaming consoles.

The programming for these systems demands a different approach than general-purpose computing. It's not just about correctness; it's about correctness **within time**. This is where the expertise of seasoned professionals like Iyer and Gupta becomes invaluable.
