How to Sight In a Bow: A Comprehensive Guide for Archers of All Levels

There's a profound satisfaction that comes with sending an arrow true and straight to its mark. Whether you're a seasoned bowhunter preparing for your next expedition, a competitive archer aiming for

the bullseye, or a beginner just discovering the joys of archery, knowing how to sight in your bow is paramount. It's not just about accuracy; it's about confidence, ethical hunting, and ultimately, making every shot count. This comprehensive guide will walk you through the essential steps to get your bow dialed in, ensuring your arrows fly where you aim.

Why Sighting In Your Bow is Crucial

Before we dive into the "how," let's talk about the "why." Sighting in your bow, often referred to as "zeroing" or "tuning," is the process of adjusting your bow's sights so that your arrows hit the intended point of impact at a specific distance. Here's why it's so important: *

****Accuracy:**** The most obvious reason. A properly sighted bow means your arrows will land where you're aiming. This is critical for ethical hunting, where a clean, quick kill is paramount, and for competitive shooting, where every point matters. * ****Consistency:**** Sighting in helps establish a baseline for your bow's performance. Once you know your bow's trajectory at a given distance, you can trust your shots and make adjustments confidently. *

****Confidence:**** There's nothing quite like the feeling of knowing your equipment is dialed in. This confidence translates to better focus and execution when it matters most. * ****Troubleshooting:**** The sighting-in process can also help identify underlying issues with your bow's setup, like arrow spine inconsistencies or fletching problems.

Getting Started: What You'll Need

To embark on your sighting-in journey, you'll need a few essential items. Don't worry; it's not overly complicated. * ****Your Bow:**** Make sure your bow is properly set up and tuned. This includes having the correct draw weight, draw length, and a properly

functioning string and cables. * **Arrows:** Use the same arrows you intend to shoot in the field or competition. Ensure they are matched in weight and spine. * **Bow Sight:** This is the crucial component we'll be adjusting. Whether it's a single-pin slider sight or a multi-pin sight, understanding its adjustment mechanisms is key. * **Arrow Rest:** A reliable arrow rest ensures your arrows leave the bow cleanly and consistently. * **Release Aid (if applicable):** Most modern compound archers use a release aid. Ensure it's functioning correctly. * **Target:** A durable archery target capable of stopping your arrows without excessive damage is essential. * **Shooting Range:** You'll need a safe place to shoot, preferably with known distances marked. A 20-yard range is an excellent starting point for most compound bows. * **Paper and Pen (or a smartphone app):** To record your adjustments and shots. * **Allen Wrenches:** The appropriate sizes to adjust your sight.

The Fundamental Principle: Adjusting Your Sight

The core of sighting in a bow revolves around understanding the relationship between your sight pin and your arrow's point of impact. Generally, bow sights have micro-adjustment screws for both vertical (up/down) and horizontal (left/right) movement. The fundamental principle is this: * **If your arrow is hitting LOW, move your sight PIN UP.** * **If your arrow is hitting HIGH, move your sight PIN DOWN.** * **If your arrow is hitting LEFT, move your sight PIN RIGHT.** * **If your arrow is hitting RIGHT, move your sight PIN LEFT.** Think of it this way: you're moving the aiming point (your sight pin) to match where the arrow is actually going.

Step-by-Step: Sighting In Your Compound Bow at 20 Yards

We'll start with a common and effective distance: 20 yards. This is a great range for initial sighting-in and for many hunting scenarios.

Step 1: The Initial Setup - Getting on Paper

1. **Secure Your Bow:** For safety and consistency, it's highly recommended to use a bow vise or have a helper hold your bow steady. This eliminates any variables introduced by your shooting form at this initial stage. 2. **Set Your Sight to Center:** Ensure your sight's pins are roughly centered in their adjustment range. 3. **Shoot a Group:** From a comfortable standing position, shoot three to five arrows at your target, aiming at the same spot each time. Try to be as consistent as possible. 4. **Assess the Impact:** Don't worry about where the arrows hit initially. The goal here is to see if they are grouping together. If your arrows are scattered wildly, you might have other equipment tuning issues to address before proceeding with sight adjustments. However, if they are grouping reasonably well, even if it's off the bullseye, you're ready for the next step.

Step 2: The First Adjustment - Bringing Your Group Closer

1. **Identify Your Group's Center:** Mentally or with a marker, find the center of your arrow group. 2. **Determine the Adjustment Needed:** Compare the center of your group to your intended aiming point (the bullseye). * If your group is below the bullseye, you need to move your sight pin UP. * If your group is above the bullseye, you need to move your sight pin DOWN. * If your group is to the left of the bullseye, you need to move your sight pin RIGHT. * If your group is to the right of the bullseye, you need to move your sight pin LEFT. 3. **Make Small Adjustments:** Using your Allen

wrench, make small, incremental adjustments to your sight. A common recommendation is to adjust in quarter-clicks or turns. Don't over-adjust. 4. ****Shoot Another Group:**** Shoot another three to five arrows, aiming at the same spot. 5. ****Evaluate and Repeat:**** Observe where your new group impacts. Continue to make small adjustments, shooting a group after each adjustment, until your arrow group is centered around your aiming point at 20 yards.

Step 3: Fine-Tuning and Verifying

Once your group is consistently hitting the bullseye at 20 yards, it's time to fine-tune and verify. * ****Confirm Consistency:**** Shoot a few more arrows, focusing on your form and aiming. Ensure the arrows are still impacting where you're aiming. * ****Small Adjustments for Precision:**** If you notice a slight consistent miss, make even smaller adjustments. Some archers use a "gap shooting" technique at this stage, where they aim slightly above or below the target to achieve perfect alignment.

Moving to Longer Distances: The Next Steps

With your bow sighted in at 20 yards, you've established a solid foundation. Now you can progressively sight in your bow at longer distances.

Step 4: Sighting In at 30, 40, 50 Yards (and beyond!)

1. ****Move to the Next Distance:**** Go to your next marked distance (e.g., 30 yards). 2. ****Aim at the Bullseye:**** Shoot a group of arrows at the bullseye. 3. ****Observe the Impact:**** Your arrows will now likely be hitting higher than your aiming point due to the arrow's trajectory. 4. ****Adjust Your Sight:**** This is where the concept of "trajectory" becomes more apparent. * If you're using a multi-pin

sight, you'll want to adjust your ****second pin**** (or the next pin in sequence) to hit the bullseye at this new distance. * If you have a single-pin slider sight, you'll move your pin up until it aligns with the center of your group. Then, you'll "lock" that position. ****Crucial Note for Slider Sights:**** When you adjust your slider sight to hit the bullseye at a longer distance, you are effectively setting the position for that specific yardage. When you return to 20 yards, you'll slide your sight back down to your original setting for that distance. 5.

****Repeat for Each Distance:**** Continue this process for each desired distance (40 yards, 50 yards, etc.). For each new distance, you'll adjust a different pin on your sight or move your slider to a new, marked position. **### Important Considerations and Tips for Success** Sighting in your bow is an iterative process, and a few extra tips can make it smoother and more effective. * ****Consistency is Key:**** When you're sighting in, try to be as consistent as possible with your shooting form, grip, and anchor point. Any variation in your shooting can lead to inaccurate adjustments. * ****Arrow Spin:**** Ensure your arrows are not "porpoising" or wobbling excessively in flight. This can indicate an issue with your arrow spine, fletching, or bow tune. A well-tuned arrow flies straight. * ****Windage and Elevation:**** Always adjust for both windage (left/right) and elevation (up/down) to get your bow perfectly sighted in. *

****Document Your Settings:**** For multi-pin sights, it's a good idea to mark your pins with the corresponding yardages (e.g., 20, 30, 40). For slider sights, you can mark the rail with tape or a permanent marker to indicate specific distances. This will save you time in the field. * ****Practice at Different Distances:**** Once sighted in, practice shooting at all the distances you've set. This reinforces your sight settings and builds confidence. * ****Understand Your Sight's Knobs:**** Familiarize yourself with the adjustment knobs on your specific bow sight. Some have tactile clicks, while others have finer micro-adjustments. * ****Paper Tuning First (Optional but Recommended):**** For optimal results, especially with compound bows, some archers

recommend "paper tuning" or "bare shaft tuning" before sighting in. This process ensures your arrows are leaving the bow straight and true, eliminating potential fletching or spine issues that could affect your sight adjustments. If your arrows are consistently hitting the target with fletching and without, you're likely in good shape. *

****Back Tension Release:**** If you use a back tension release, ensure you are employing it correctly for consistent shots. *

****Take Breaks:**** Sighting in can be a tedious process. Take breaks to avoid fatigue and maintain focus.

Sighting In a Traditional Bow (Recurve/Longbow)

While most of the principles apply, sighting in a traditional bow without sights is a bit different. It relies heavily on the archer's ability to "point and shoot" or uses a primitive sight like a "strike plate" or "arrow rest" as a reference. *

****Instinctive Aiming:**** For those who shoot instinctively, sighting in is more about developing muscle memory and a consistent anchor point. You aim by looking at your target and allowing your body to naturally point the bow. *

****Arrow Spine and Fletching:**** The correct arrow spine and well-fletched arrows are even more critical for traditional bows to ensure a straight flight. *

****Adjusting the Rest:**** Some traditional archers might experiment with the height or position of their arrow rest or strike plate to slightly influence the arrow's point of impact. *

****Gap Shooting:**** This is a common technique for traditional archers. You aim at a point below your intended target, and the gap between the arrow point and the target widens with distance. This gap is learned through practice and observation.

Troubleshooting Common Sighting In Issues

Even with the best intentions, you might encounter a few hiccups. *

- * **Inconsistent Groups:** If your arrows are scattering widely, it's likely not a sight issue but a broader equipment or form problem. Check your bow's tune, arrow spine, fletching, and your shooting technique.
- * **Arrows Hitting Off-Center Constantly:** If your arrows are consistently hitting to the left, right, high, or low, and you've verified your form is consistent, then it's time to make those sight adjustments.
- * **Sight Not Moving Enough:** Ensure you haven't reached the limit of your sight's adjustment range. If this happens, you might need to re-center your sight and start over or consider a bow tune-up.

Conclusion: The Reward of a Dialed-In Bow

Sighting in your bow is a fundamental skill that every archer should master. It's a process that demands patience and attention to detail, but the rewards are immense. A properly sighted bow translates to more accurate shots, increased confidence, and a more enjoyable and successful archery experience, whether you're pursuing game in the wilderness or aiming for the podium. So, grab your gear, head to the range, and start the journey of dialing in your bow. The satisfaction of sending those arrows exactly where you intend them to go is well worth the effort. Happy shooting!

Sighting in a bow is a foundational step for any archer seeking accuracy and consistency, whether you're using a traditional recurve, compound, or longbow. While modern bows are engineered for precision, proper sight alignment ensures your shots hit the

center consistently across varying distances. Unlike firearms, bows rely on mechanical sight systems—such as pin or reflex sights—positioned to guide your arrow along a predictable trajectory. Getting this step right transforms raw strength and technique into reliable, repeatable performance.

Understanding the Sighting

Process Sighting in a bow

involves aligning the bow's sights with the bowstring's path so that each shot hits where you intend.

Unlike rifles, where scopes offer fixed magnification, bow sights are typically open sights—simple pin or post configurations that require careful adjustment. The goal is to center the sight image over the target at a set distance, usually 10 to 20 yards, before transitioning to field conditions.

This alignment compensates for the bow's draw weight, arrow weight, and the natural arc of the arrow as it flies. Whether you're practicing at home or preparing for competition, mastering this process ensures every shot begins with a solid foundation. To begin, mount or stabilize your bow securely, ensuring it's level and free from movement. Center your draw, applying consistent tension to maintain a steady form. At your chosen distance, aim precisely at a target, adjusting the sight pins or posts until the center of each pin aligns

perfectly with the arrow's notch—often called “hitting the center.” Sighting in at multiple distances is critical, as arrow flight changes with range; a sight set at 10 yards may miss at 30 yards, requiring fine-tuning. Use a quality target and consistent form to eliminate variables, allowing you to isolate the impact of sight alignment.

Key Insights for Effective Sighting
One critical insight is understanding your bow's characteristics. Compound bows, with their adjustable limbs and cams, offer enhanced precision

but demand careful alignment of both pin sights and optical aids if used. Recurves and longbows, while simpler, rely entirely on fixed sight placement, making accuracy in initial setup even more essential. Arrow selection also plays a role: weight, spine, and fletching style affect trajectory, requiring sight adjustments for optimal grouping. Another key factor is environmental awareness. Wind, height, and temperature can subtly shift arrow flight, but the primary focus remains sight alignment. Even in calm

conditions, a misaligned sight compromises grouping. Regular practice at multiple ranges builds muscle memory and reinforces proper technique. Many archers use a bubble level to ensure the bow is square to the target, minimizing angle errors that throw sight alignment off.

Applications and Benefits Beyond the Range Sighting in isn't just for competition—it's essential for hunting, target shooting, and archery training. A well-sighted bow delivers consistent performance, reducing guesswork and increasing confidence. For

hunters, accurate shot placement ensures ethical, clean kills at range; for target archers, it means tighter groups and faster improvement. On the training side, consistent sighting builds discipline, teaching archers to focus on fundamentals before adding complex tools. Moreover, proper sight alignment extends equipment life. Misaligned sights or inconsistent draw techniques can strain components, leading to premature wear. By starting with accurate setup, archers protect their investment and maintain peak performance over time. This

foundational step also supports progression—whether transitioning to higher draw weights or advanced bow types—ensuring each new challenge builds on a reliable base.

The Future of Bow Sighting and Archery Precision As technology advances, bow sighting continues to evolve. While traditional pin sights remain popular for their simplicity and reliability, reflex and digital sights with adjustable magnification are gaining traction, especially among hunters and competitive archers.

These tools offer enhanced visibility and range estimation, yet the core principle of accurate sight alignment remains unchanged. Looking ahead, integration of smart sensors and real-time feedback systems may soon revolutionize sighting. Imagine bows equipped with built-in alignment indicators that guide archers to perfect sight alignment through visual or auditory cues. While such innovations are still emerging, the fundamental importance of sighting—aligning sight and aim with precision—will endure. For

now, mastering manual sight adjustment remains the cornerstone of archery excellence, empowering archers to harness their bow's full potential through skill, consistency, and care.

Mastering Your Aim: A Comprehensive Guide to Sighting In Your Bow

For any archer, whether you're a seasoned hunter preparing for deer season or a recreational enthusiast enjoying a day at the range, accurate shooting is paramount. The cornerstone of

consistent accuracy lies in the meticulous process of sighting in your bow. This isn't just about hitting the bullseye; it's about understanding your equipment, your arrow's flight, and how to make precise adjustments for every shot. This detailed guide will walk you through the entire process, equipping you with the knowledge and confidence to dial in your bow for peak performance.

Why Sighting In Your Bow is Crucial

Before we dive into the 'how,' let's address the 'why.' Simply attaching a sight to your bow and assuming it will be accurate out

of the box is a recipe for frustration. Every bow and arrow combination is unique, and external factors like wind, arrow spine, and even the archer's form can influence the shot. Sighting in ensures that your sight's pins are calibrated to the exact trajectory of your arrows, allowing you to predict where your projectile will land with remarkable predictability. This is especially critical for ethical hunting, where a clean, humane shot depends on pinpoint accuracy. For target archers, it's the difference between bragging rights and coming home empty-handed.

Essential Equipment for Sighting In

To embark on the journey of sighting in your bow effectively, you'll need a few key pieces of equipment:

- 1. Your Bow:** Ensure it's properly tuned and set to your draw weight and draw length. An untuned bow will make sighting in a futile exercise.
- 2. Arrows:** Use the same arrows you intend to shoot in the field or for competition. Consistency in arrow spine and weight is vital.
- 3. Bow Sight:** This can be a single-pin, multi-pin, or even a pendulum sight. Ensure it's

securely mounted.

- 4. Arrow Rest: A properly functioning arrow rest is crucial for consistent arrow launch.**
- 5. Bow Release: Whether it's a mechanical release or a finger tab, use what you're comfortable with.**
- 6. Target: A high-quality archery target that can withstand repeated shots is essential.**
- 7. Shooting Range: A safe and controlled environment with sufficient distance is necessary. Start at closer ranges and gradually increase.**
- 8. Tools: You might need Allen wrenches or other specific tools**

for adjusting your sight and other bow components.

- 9. Paper and Pen/Device: To record your adjustments and observations.**

The Fundamentals of Bow Tuning and Preparation

Before you even pick up an arrow to sight in, a well-tuned bow is paramount. This includes:

- 1. Arrow Spine and Fletching:**

Ensure your arrows are the correct spine for your bow's draw weight and length.

Properly applied fletching is also crucial for stable flight.

- 2. Bow Square: Using a bow**

square, verify that your arrow rest is perpendicular to the arrow shaft when the bow is at brace.

- 3. Nock Point: The nock point on your string should be set correctly. This is the point where your arrow nocks onto the string. A slight upward adjustment is often recommended for consistent arrow launch.**
- 4. Center Shot: Ensure your arrow is centered on the string and aligned with the sight.**
- 5. Cam Timing (Compound Bows): For compound bows, ensure the cams are synchronized. This**

affects the bow's draw cycle and shot consistency.

Skipping these initial tuning steps will make sighting in a frustrating and inaccurate process. It's akin to trying to align a car's wheels with a bent rim - you'll never achieve true accuracy.

The Step-by-Step Process of Sighting In Your Bow

Now, let's get down to the actionable steps for sighting in your bow. The general principle is to shoot at a consistent distance and adjust your sight based on where your arrows are hitting

**relative to your aiming point.
We'll start at a closer range and
work our way out.**

Step 1: The Initial Setup and First Shots (10-20 Yards)

**Begin at a relatively close
distance, such as 10 or 20 yards.
This allows you to make
significant sight adjustments
without having to move the sight
drastically. Group your shots as
tightly as possible before making
any adjustments.**

- 1. Establish a Consistent Anchor
Point: Every shot should begin
with the exact same draw length
and anchor point. This is the**

foundation of repeatable accuracy.

- 2. Aim at the Bullseye: Focus on the center of your target.**
- 3. Execute a Smooth Shot: Focus on a clean release and follow-through. Avoid any jerky movements.**
- 4. Observe the Group: After firing a few arrows (aim for a 3-5 arrow group), observe where they are landing in relation to the bullseye.**

Step 2: Understanding Sight Adjustments

Most bow sights have adjustment screws for vertical (up/down) and horizontal (left/right) movement.

These are typically marked with arrows or indicators.

1. Vertical Adjustment:

- 1. If your arrows are hitting
low, move your sight *up*.**
- 2. If your arrows are hitting
high, move your sight
down.**

2. Horizontal Adjustment:

- 1. If your arrows are hitting
left, move your sight *right*.**
- 2. If your arrows are hitting
right, move your sight *left*.**

Crucial Tip: Make small, incremental adjustments. You can always make more significant adjustments if needed, but

starting small prevents overcorrection.

Step 3: Adjusting Your Sight

Based on your observation in Step 1, make the necessary adjustments to your sight. For example, if your group is consistently 3 inches low, you'll need to move your sight up. The amount you move it depends on the sight's adjustment increment. Many sights have markings that indicate how much movement corresponds to a certain distance. If you're unsure, consult your sight's manual.

Example: If your arrows are 3

inches low at 20 yards, and your sight's vertical adjustment moves the sight 1 inch for every 1 click, you would move your sight up 3 clicks. This is a simplified example; real-world adjustments depend on the sight's design.

Step 4: Re-testing and Fine-Tuning

After making your adjustments, fire another group of arrows from the same distance. Assess the new impact point and repeat the adjustment process until your arrow group is centered on your aiming point. This iterative process is key to achieving precision.

Step 5: Increasing the Distance

Once you're consistently hitting the bullseye at your initial short distance, gradually increase the shooting distance. A common progression is 20 yards, then 30 yards, 40 yards, and so on, up to your maximum expected shooting distance (e.g., 60 yards for many hunting scenarios, or further for competition).

Sighting In at Longer Distances

At longer distances, your arrows will naturally drop due to gravity. This is where the different pins on a multi-pin sight come into play, or where you'll adjust your single-

pin sight's position for each distance.

- 1. Set Your First Pin (e.g., 20 Yards):** Ensure your first pin is perfectly sighted in at your chosen starting distance.
- 2. Move to the Next Distance (e.g., 30 Yards):** Shoot a group at the next distance. Notice how much your arrows are now dropping below your aiming point.
- 3. Adjust Your Second Pin (or Sight Position):** Move your second pin (or adjust your single-pin sight's position) until it is centered on your aiming point at this new distance.
- 4. Repeat for All Pins/Distances:**

Continue this process for each subsequent distance you want to sight in.

Step 6: Verifying Consistency and Arrow Flight

Once you've sighted in at your desired distances, it's crucial to verify consistency and observe your arrow flight. Are your arrows flying true? Are there any signs of erratic behavior? This is where understanding **arrow tuning**** becomes important.**

1. Paper Tuning: Shoot an arrow

through a piece of paper placed a few feet in front of your bow. The tears in the paper can indicate issues with arrow spine, fletching clearance, or nock point.

- 2. Walk-Back Tuning: This method involves shooting at the same bullseye from progressively longer distances and observing how the arrow group moves vertically. It helps diagnose issues with your arrow rest or nock point.**
- 3. Broadhead Tuning: If you plan to hunt with broadheads, it's essential to sight them in separately. Broadheads can fly**

**differently than field points.
Ensure your broadheads are
grouping with your field points.**

Step 7: Practicing and Maintaining Your Sight-In

Sighting in your bow is not a one-time event. Your equipment can change, and your shooting form can fluctuate. Regular practice and periodic checks are essential.

- 1. Regular Practice: The more you shoot, the more familiar you'll become with your bow's performance at different distances.**
- 2. Periodic Checks: Before a hunting season or important**

competition, re-verify your sight settings, especially if you've made any equipment changes or experienced any knocks.

3. Environmental Factors:

Understand how wind and temperature can affect your shots. While sighting in is done in calm conditions, you'll need to account for these variables in the field.

Troubleshooting Common Sighting-In Issues

Even with careful attention, you might encounter problems. Here are some common issues and their potential solutions:

1. Inconsistent Groups:

- 1. Cause: Poor shooting form, untuned bow, inconsistent anchor point, arrow inconsistencies.**
- 2. Solution: Focus on a repeatable shooting process, ensure your bow is tuned, check your arrows.**

2. Arrows Flying Off Course (Porpoising or Wobbly Flight):

- 1. Cause: Fletching damage, incorrect arrow spine, arrow rest misalignment, nock point issues.**
- 2. Solution: Inspect fletching, check arrow spine, re-evaluate bow tuning and nock point.**

3. Difficulty Grouping Broadheads with Field Points:

- 1. Cause: Differences in weight and aerodynamics between broadheads and field points.**
- 2. Solution: Broadhead tune your bow separately. Ensure your broadheads are sharp and properly aligned.**

Questions & Answers About how to sight in a bow

N o	Question	Answer
1	What's the easiest way for a beginner to sight in a bow?	For beginners, starting with a paper plate at 10-20 yards is ideal. Shoot from a stable rest (like a shooting bench or sandbags) and make small adjustments to your sight pins based on where your arrows hit the plate. Focus on consistent form before worrying about perfect groupings.
2	How do I sight in my bow for hunting at longer distances?	Once you're comfortable at shorter ranges, gradually increase your distance (e.g., 30, 40, 50 yards). Sight in each pin individually at its intended range. For instance, sight in your 20-yard pin at 20 yards, your 30-yard pin at 30 yards, and so on. This creates a reliable trajectory for your arrows.
3	My arrows are grouping well but hitting too high. What should I adjust?	If your arrows are consistently grouping high, you need to lower your sight. Most sights have vertical adjustment screws. Lowering the sight housing will cause your arrows to strike lower on the target. Make small adjustments and re-shoot until you're on target.
4	What's the difference between adjusting the sight pin and the rest?	Adjusting the sight pin (up/down or left/right) changes where the arrow hits relative to your aiming point. Adjusting the arrow rest (usually up/down) fine-tunes the arrow's trajectory and can help correct vertical tears in paper tuning. You'll typically sight in after ensuring your arrow rest is properly tuned.

5	Should I use broadheads or field points when sighting in?	It's crucial to sight in with the exact same type of arrow and point you'll be hunting with. Broadheads can fly differently than field points due to their design. Sight in with your broadheads for the most accurate hunting setup.
6	How often should I check and sight in my bow?	You should re-sight your bow at least annually, or anytime you change strings, cables, arrows, or make significant adjustments to your bow. It's also a good practice to do a quick check before each hunting season or a major outing to ensure everything is still on point.
7	What are the most common mistakes people make when sighting in?	Common mistakes include inconsistent shooting form, making large sight adjustments at once, not shooting enough arrows to establish a true group, and failing to sight in with the actual hunting arrows/broadheads. Patience and small, deliberate adjustments are key.
